Preface

Alaska Population Overview

Alaska Population Overview provides a portrait of the ever-changing people of the State of Alaska. The goal is to provide a wide variety of frequently requested population information in a single publication. Populations presented here are for the resident population of Alaska. All July 1 population estimates represented here represent an annual average population for each year rather than the population on July 1. Seasonal populations in parts of Alaska may be higher than the annual average permanent resident population. Readers should note that the entire time series for population is updated each year so that time series information should be taken from the most recent publication rather than annexing the most current year's estimate to that published previously. The "Vintage" of the population estimate indicates the year in which it was produced.

This edition of *Alaska Population Overview* consists of four chapters, which include current and historical estimates for the state, its boroughs, census areas and places, as well as information and data from the April 1, 2000, U.S. Census of Population and Housing. The population concepts and definitions used here are the same as those used by the United States Bureau of the Census at the time of the 2000 census. Terms and concepts are defined in a glossary found at the end of this publication.

Accuracy

While estimates in this publication are published in unrounded form for ease of use in other computations, the reader should not assume that estimates are accurate to the last digit. In general, the state estimate is assumed to be accurate to the nearest thousand and borough and census area estimates to the nearest hundred.

Acknowledgments

Special acknowledgment is given to the Vital Statistics sections of the Division of Public Health and the Department of Health and Social Services and the Alaska Department of Revenue for their aid in providing information essential to the production of these estimates. Special thanks also goes to the Department of Health and Social Services for the financial support in the production of these estimates. Thanks also go to the personnel departments of the Army, Air Force, and Coast Guard in Alaska for the statistics they provide each year on the military population of Alaska.

Comments or suggestions regarding the content or format of this publication are welcome. Many of the most requested statistics found here may also be found on the Research and Analysis Web site at: <http://laborstats.alaska.gov> - Select Population Estimates & Projections from the choices at the left. Requests for demographic estimates and projections information may also be addressed to Greg Williams, Research and Analysis Section, Alaska Department of Labor, P.O. Box 115501, Juneau, Alaska, 99801-5501. Telephone: (907) 465-6029; FAX: (907) 465-4506; email: gregory.williams@alaska.gov

Executive Overview

Alaska Population Overview

State Population Estimate

The July 1, 2009 population of Alaska was 692,314 (51% male and 49% female), and represented .23% of the national population.

Age

The median age of Alaska's population in 2009 was 33.5 years, somewhat less than the national median age of 36.8. Alaska, along with the nation as a whole, is aging, and as the large proportion of residents who were born during the "Baby Boom" years (1946-1964) reach retirement, the Alaska labor market and pension systems will certainly be impacted. Between the years 2000 and 2009, the population of Alaskans age 65 and above increased as a share of the total population, from 5.7% to 7.5%. Though the school age population (persons from ages 5 to 17) of Alaska saw little numerical change from the years 2000 to 2009, it decreased as a share of the overall population from 22.6% to 20.5%. [See Figure 1.6]

Race and Ethnicity

Alaska's racial and ethnic composition continues to be diverse. As of July 1, 2009, it consisted of: 16.2% Alaska Native, 70.4% White, 4.2% Asian, 3.8% African American, 0.6% Hawaiian and Pacific Islander, and 4.8% Multi-Race. Multi-Race persons in Alaska are predominantly a combination of Alaska Native and some other race. Ethnicity is a separate categorization from race, and in the United States is used to distinguish Hispanics from non-Hispanics. In 2009, persons of Hispanic ethnicity represented 5.0% of the overall state population. [See Tables 1.9 and 1.10]

Population Change

Between 2008 and 2009, Alaska saw steady increase in overall population (1.5%). Since the early 1990's, Alaska has seen relatively stable annual growth, for which natural increase (the difference between births and deaths) has been an important component. Recent population growth in the state has been largely confined to certain areas, including the Mat-Su, Anchorage and Fairbanks North Star Boroughs. Many areas of Southeast and rural Alaska have experienced a recent decline in population. [See Tables 1.1 and 2.1, Figure 1.2]

Migration

Migration represents the most unpredictable component of population change. In 2008-2009, Alaska experienced continued high gross migration rates, with roughly 47,200 migrating in and 45,000 migrating out, for a net migration gain of 2,261 persons. Small shifts in Alaska's ability

to provide labor and resources relative to other places can have major implications for its population size and composition. From 2006-2008, 41.0% of Alaska migrants had an origin or destination in the Western United States, and 33.1% had an origin or destination in the Southern United States. [See Tables 1.2 and 1.3, Figure 1.4]

Births and Deaths

In 2008-2009, Alaska added 11,454 young persons to its population by births. In 2009, Alaska had a fertility rate of 2.4 children per family, compared to 2.1 for the nation as a whole. There were 3,378 deaths in Alaska in 2008-2009, a relatively small number, in-line with our population's relatively young age. [See Table 1.1]

Urban and Rural

75% of Alaska's population in 2009 lived in areas of 2,500 or more persons, only slightly lower than the national average. The major cities of Alaska, those with more than 10,000 persons, included Anchorage (290,588), Fairbanks (32,506) and Juneau (30,661). These three areas were home to 51.1% of Alaska's population. Though our state is massive in land-size (586,412 square miles), much of its area is owned by federal government, state government and Native corporations, and only a very small proportion (about 1%) is in other private ownership. [See Table 4.1]

Households

There were 252,526 households in 2009, an increase of 14.0% since 2000. Households in Alaska averaged approximately 2.7 persons in 2009. 67.3% of households in Alaska were family homes, 49.1% of households had married couples (a subset of families). 34.2% of Alaskan households had children in them, and 24.7% of Alaskan households consisted of persons living alone. [See Tables 1.30 and 2.2]

Group Quarters

The group quarters population of Alaska represents persons living in dwellings other than households. In 2009, 21,498 persons were living in group quarters in Alaska, representing 3.1% of the total population. Approximately 58.5% of Alaska's group quarters population in 2009 was living in the Municipality of Anchorage and Fairbanks North Star Borough. The Aleutian chain, with its large fishing and seafood processing industries, was the area with the highest rate of group quarters living in 2008, at 45.4%. [See Table 2.2]

Introduction

Uses of Demographic Data

Demographic Programs

The Demographics Unit of the Alaska Department of Labor and Workforce Development, Research and Analysis Section, is Alaska's representative to the Federal/State Cooperative Program for Population Estimates (FSCPE) and the Federal/State Cooperative for Population Projections (FSCPP) programs with the U.S. Bureau of the Census. A wide range of state administrative records data are compiled and maintained by FSCPE agencies. They also prepare and review various estimates at the state, county and sub-county geographic levels. The FSCPE program is the only federally accepted source of population estimates between the censuses that are conducted every 10 years. The Research and Analysis Section also contains a third federal/state cooperative program, the State Data Center program, housed in the Census and Geographic Information Network (CGIN) Unit whose function is the dissemination of U.S. Census Bureau statistics, geography and other information.

The Research and Analysis Section (R&A) circulated 1,000 copies of Alaska Population Overview: 2009 Estimates, and published it on-line. A variety of the most recent population estimates are available on our web. Requests for information generally come from federal, state and local government organizations, business and industry, nonprofit organizations, and individual citizens. The ongoing FSCPE program, along with the State Data Center program, also played a critical role in 2000 and 2010 promoting and evaluating the decennial census. R&A has reviewed census plans to insure that they are appropriate for Alaska and reviewed preliminary census results for error. A good decennial census helps to insure that Alaska's share of federal funding is maintained through the decade and that estimates are generated from an accurate population base. The FSCPE program also works to identify and correct errors that may have occurred in the 2000 and 2010 censuses. These corrections are then incorporated into a new "estimates base" which is used as the starting point for computing estimates for the decade. This publication includes all of the census corrections known to date.

Demographics for Equal Allocation

Demographic statistics play an essential role in making decisions about the best way to spend scarce resources in government, business, and private nonprofit organizations. Government's

use of demographic statistics helps insure democratic distribution of resources to the public at large or a segment of the public that is the focus of a specific program. In business, demographics function to direct resources in order to increase revenues. Private nonprofits use demographic statistics to identify the special interest clients to be served. It is significant that for the framers of the U.S. Constitution equal representation was a keystone of democracy. Fair and equal access of every American to resources and services is an underlying principle of American government. Because federal, state and local funds are limited, the possibility of one group or community getting a disproportionate share of resources designated for all undercuts the principles of democracy. For this reason, up-to-date population estimates are essential for the allocation of funds and services at every level of government. Demographic statistics are frequently used to insure equal access to jobs, housing, education, wages and representation. Some examples include Equal Employment Opportunity/Affirmative Action laws, voting rights act compliance, and jury selection. Equal access to funding occurs through per capita distribution. Many government program funds are distributed solely on a per capita basis. Services such as liquor licenses are also regulated on a per capita basis. Some governmental and private nonprofit programs, however, are directed at a particular sub-group of the population who meet an eligibility requirement. For example, programs may also be targeted by geography, such as those for residents of low-income neighborhoods. The more specific the targeting, the more detailed the population and geography needed to insure that funds serve those for whom they were intended.

The business of targeting uses population statistics for market segmentation. To be eligible for targeted funds or services may mean having a specific characteristic such as being of school age, elderly, poor or handicapped. Another type of minimal eligibility applies to licenses and regulations for communities of a given size. For example, Alaska plumbing and electrical codes do not apply to very small communities. Funding for mass transit programs may only be available for larger communities. Banks and businesses typically evaluate community size to determine if there is sufficient market for a business, service or level of bonding.

Another aspect of targeting is geographic. Business and government use demographic statistics to locate facilities. Manufacturing plants,

banks, landfills, stores and the location of offices for business, government and private nonprofit service areas all depend on the location of some population relative to the facility. Assessing demand placed upon natural resources and wildlife often depends on the geographic distribution of both population and resources. One example is bowhead whale allocations to Alaska's northern coastal villages.

Demographics for Decisions

There are two key uses of demographics for decision making. The first is determining populations at risk for purposes of rate computation (i.e., birth rates, death and disease rates, teen pregnancy rates, crime rates). Such rates quantify the existence and prevalence of an event. Rates are necessary to compare the number of persons at risk in Alaska to the number at risk elsewhere. The second is the extensive use now made of sample surveys. Such surveys are valid only when the characteristics of the survey universes are known. This requires a variety of demographic statistics for the area being surveyed.

Making good decisions in any activity requires knowledge of the character and history of that activity. This is what education and experience provide. Statistics that describe characteristics, geographic distribution and trends are an essential part of the education needed for good decision-making. The analysis of trends and projections also is aimed at assessing the impact of different possible courses of action. News and public media organizations also demand this information as part of their ongoing efforts to keep the public informed of the changes that affect the decisions they must make as citizens.

There are certain fields where demographic information strongly affects decision-making in government, private nonprofit organizations and businesses. These include: health and health care; community, social and human services; education; land use and real estate; environmental impact; economics, banking and financial services; manufacturing, wholesale and retail marketing; transportation and shipping; and travel and leisure services.

Estimates and Federal Fund Allocation

As stated above, one particular use of demographic estimates is fund distribution. In FY08, the most recent year of data, \$11.1 billion in federal money came to Alaska in the form of salaries, retirement benefits, loans, direct payments to individuals and federal general government programs. Of the 636 federal program codes that provided money to Alaska, some 513 general government programs and one direct payment

program accounted for \$2.7 billion. About \$1.7 billion, or 63.1%, of all general government federal dollars coming to Alaska have formulas that depend either directly or indirectly on population. These are driven by the estimates generated by the Federal State Cooperative for Population Estimates.

A few large programs accounted for the vast majority of all population formula dollars returned to Alaska in FY08. In millions of dollars, these were: Medicaid (\$693.1); Highway Planning and Construction (\$383.1); Airport Improvement-State Apportionments (\$186.1); Indian Housing Block Grant (\$80.5); Federal Transit Capital Investment Program (\$48.0); Urban Mass Transportation Technical Studies (\$31.9); Special Supplemental Food Program for Women, Infants and Children (WIC)(\$24.2); State Children's Insurance Program (\$22.2); Unemployment Insurance (\$22.1); Educationally Deprived Children-Local Education Agencies (\$19.9); Payments In Lieu of Taxes (\$15.6); Improving Teacher Quality State Grants (\$14.0); Administration for Children and Families (\$13.6); and Child Support Enforcement (\$12.3). These 14 programs accounted for 91.9% of the federal formula dollars that were population dependent.

The next largest programs were, in millions of dollars: Water and Waste Disposal Systems (\$11.5); Foster Care Title IV (\$10.3); Adoption Assistance (\$8.1); Employment Services (\$7.9); Child Care (\$7.4); Economic Development (\$6.6); Nonurban Public Transportation (\$6.5); Day Care Assistance (\$4.4); Vocational Education - Basic Grants (\$4.2); Coastal Zone Management Program (\$4.0); Social Services Block Grant (\$3.8); Rural Rental Assistance (\$3.7); Special Programs for the Aging Title VII (\$3.0); Special Programs for the Aging Title III (\$2.9); Special Economic Development and Adjustment (\$2.8); Emergency Shelter Grant Programs (\$2.6); Family Violence Shelter Programs (\$2.3); State Public Water System Supervision (\$2.3); Senior Community Service Employment Program (\$2.2); Special Education (\$2.1); Community Development Block Grants (\$2.1); and Assistance to Firefighters (\$2.0). In total, programs of more than \$2.0 million account for 98.4% of all population-dependent federal dollars coming to Alaska.

By federal department, population-dependent program money, in millions of dollars, coming to Alaska was as follows: Department of Health and Human Services (\$793.4), Department of Transportation (\$658.5), Department of Housing and Urban Development (\$86.2), Department of Education (\$45.8), Department of Agriculture (\$42.0), Department of Labor (\$33.2), Department of Interior (\$19.5), Department of Commerce (\$13.4), Department of Environmental Conservation

(\$3.2), Department of Justice (\$2.2), Arts and Humanities (\$2.1), Homeland Security (\$2.0), AmeriCorps (\$1.9), Small Business Administration (\$0.5), and Department of Energy (\$0.3).

Estimates, Regulation and State Fund Allocation

Federal funding formulas are only one aspect of the impact of population on the distribution of federal dollars to the states. Population estimates are used by the Internal Revenue Service to provide credit ceilings for state bonds and by the Federal Election Commission to determine spending limits for presidential and congressional election campaigns. Program managers at the state level also use population statistics throughout the process of further distribution of federal dollars to local communities. These programs use ongoing state estimates for counties and localities, as well as complex social and economic demographic characteristics.

Demographic statistics are also used to distribute state funds to local communities from state revenues. Population estimates play a key role in Alaska in distributing state funds to boroughs and municipalities. Population estimates play a major role in the allocation of quota share money from the Bering Sea Fishery through the Community Development Quota (CDQ) program to coastal villages. The CDQ program equity for 2008 was \$427.6 million. In addition, the Department of Commerce and Economic Development will distribute some \$49 million through Municipal Assistance (Power Cost Equalization, Payments in Lieu of Taxes and Shared Fisheries Business Tax) based upon population estimates and local censuses.

Alaska Statute and Regulation

At least 98 sections of the Alaska Statutes and 126 sections of the State Administrative Regulations reference population estimates or projections. Some of these cover areas such as: issuance and transfer of alcoholic beverage licenses, bank and savings and loan incorporation, state business licensing, Regional Education Attendance Area (REAA) school board sections, elections, Alaska Housing Finance Corporation operations, allocation of funds for highway construction, provision for public health, municipal government incorporation, municipal powers and duties, municipal planning and land use, municipal tax resource equalization and limitation, distribution of moneys from school and mental health lands, State Budget Reserve Fund appropriation limit, school capital improvements and construction bonding, library operation, capital projects matching grants, capital budget submittal, planning for public works and municipal oil and gas production property tax limitations.

Detailed population estimates are also critical to planning for emergency management and Homeland Security, in case of disaster or attack. Population information is also required for employment preferences in public contracting and implementation of water, air and environmental conservation regulations. While not required by regulation, current population is also used to allocate state police resources and local fire resources.

Chapter 1

Alaska State Population

Introduction

This chapter discusses population trends for Alaska. It contains a section on the components of population change, which includes birth, death, and migration flows. There are discussions of the age, male/female and race composition as well.

The Census Base for Estimates

Estimates produced here follow the Census Bureau's definition of residency. The U.S. Bureau of the Census defines a resident as a person who resides in a place for at least six months of the year, or has no other usual place of residence. The reason for defining residents in this way is to avoid double counting. Foreign nationals who were resident aliens were counted in the U.S. communities in which they lived, as were college students and military personnel. Workers at remote sites, such as the North Slope and fish processing or lumber camps, are allowed to list their place of residence as someplace other than the work site. In 1980, 1990 and 2000, for example, most North Slope oil workers listed their place of residence as elsewhere in Alaska or out of state.

Estimates shown for July 1 represent annual average resident population rather than the population on that date. Alaska's employment is the most seasonal in America, with a large proportion of the labor force in fishing and seafood processing, construction, logging, mining and tourism. At any point in time there are substantial numbers of nonresidents working in Alaska, primarily in seasonal jobs. During 2008, the most recent year for which information is available, about 79,618 or 19.6% of all persons who worked at some time during the year in nonfederal covered wage and salary employment, were nonresidents. This number, however, overstates the number of nonresidents in the state at any given point in time, because these workers are present for varying periods of time. While exact estimates of nonresidents at any point in time during the year are not possible, the seasonal summer, non-tourist, nonresident population was probably equivalent to about 10% of the resident population. Seafood processing, in particular, has a very high percentage of nonresident workers, averaging 74% nonresident for the state as a whole. In some small coastal communities, these seafood workers can outnumber the permanent residents during the fish processing season. In other communities, nonresident or

seasonal workers in industries such as tourism may outnumber the permanent residents. The greater this seasonal population, the more difficult it is to accurately estimate the permanent population. Sometimes communities will attempt to count transient workers as residents. Since communities provide services to transient populations, they often feel justified in claiming them as residents for revenue sharing purposes. Such populations do not, however, meet Census Bureau definitions for residency.

As in previous editions of Alaska Population Overview, this edition continues to include some frequently used 2000 census information. The 2000 census counted some persons in fish processing and other transient activity who had no place of residence elsewhere as Alaska residents. United States ships in U.S. waters were also assigned to their port of origin or destination as of April 1, 2000. Ships' crews were considered as group quarters population. Persons living on board small craft were counted the same as persons living in houses or apartments. Crews of small fishing vessels were counted at their shore-based homes. Coast Guard ships were counted as group quarters in their home port. Crews are supposed to be counted at their shore based homes. Vessels attributed to Alaska ports accounted for 1,073 persons in the 2000 census in Alaska, or 0.2% of the state's population. This is about half of the number attributed to Alaska in 1990. In 2000, these ships contributed a significant portion of population to two of the state's boroughs and census areas. In the Aleutians West Census Area, for example, crews from these ships accounted for 12.5% of the population and in Aleutians East Borough, 5.2% of the population. At the community level, these vessels had an even larger impact. Their crews comprised 19.8% of the population of Unalaska, and 15.9% of Akutan. In these communities, the ships represented a very transient population that varies seasonally or from year to year.

Population Trends

The provisional July 1, 2009, Alaska resident population was estimated to be 692,314, or 0.23% of the population of the U.S. The 2009 population of the United States, excluding territories and military overseas, was 307,006,550. The U.S. is comprised of 50 states plus the District of Columbia. Alaska in 2009 still ranked 47th in population, unchanged from 2004. Wyoming, with a population of 544,270;

the District of Columbia, with a population of 599,657; Vermont, with a population of 621,760; and North Dakota with a population of 646,844 have fewer people. The land area of Alaska covers 571,951 square miles; water area is 91,316 square miles. Alaska has about 16.1% of the land area of the U.S. and over 35% of the water area. In spite of its low population density of 1.1 persons per square mile of land, Alaska's population in 2000 was 65.6% urban. The U.S. percent urban in 2000 was 79.0%. The census definition of "urban" changed in 2000, from places of 2,500 or more to a density measure. By the old 1990 definition, Alaska was 73.9% urban in 2000 and 75% urban in 2009. In 2009, the U.S. averaged 86.8 persons per square mile. Excluding Anchorage, which contains 42% of the state's population but only 0.3% of the land area, Alaska averaged 0.7 persons per square mile in 2009. Most Alaskans live in towns and villages or clustered settlements. As discussed in Chapter 4, most of the state's land area is in federal and state parks, forests, wetlands, wildlife and wilderness preserves, Alaska Native Corporation lands, and 5,000 glaciers. Excluding these areas, most of which place exclusions or restrictions on settlement, only about one percent of the state's land is in other private ownership. In all, these private holdings amount to an area about 27% less than the state of Massachusetts or the state of New Jersey, and a fair amount of this land is inaccessible or unusable for settlement. Consequently, most of Alaska contains settlements of moderate density surrounded by large tracts of uninhabited land.

Alaska Population History

The population of Alaska was quite small before the gold rush in the 1880s. Early territorial censuses were incomplete. The first census in 1880 counted only 33,426 persons. The gold rush doubled the state's population between 1890 and 1900. Following the turn of the century the population of Alaska remained stable for the next 40 years. The 1900 population was reported at 63,592, but by 1939 the population remained at only 59,278. The state's gold production had declined, and much of the state at that time remained inaccessible. World War II brought the construction of the Alcan Highway. The result was dramatic growth of the state's population, as shown in Table 1.1 and Figure 1.1. The war and Alcan construction played a key role in the development of both Anchorage and Fairbanks. Although the military share of the state's population has declined since World War II, it continues to play a substantial role. In 1990, about 10% of the population was made up of military and dependents; by 2009, they accounted for only 8.4%. Alaska's population grew rapidly from the end of World War II to 1952. The average annual rate of increase was 9.5% per year. The population grew at a slower, smoother pace from 1952 to 1965, with an average annual rate of change of 2.7% per year. Alaska had approximately 224,000 people at the time of statehood in 1959. From 1965 to 1973, population growth rate gradually increased to 3.0% per year.

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit

The building of the 800-mile trans-Alaska oil pipeline dramatically affected population growth in the 1970s. The pipeline linked the giant North Slope oilfield of Prudhoe Bay with the oil terminal shipping facilities at Valdez. Construction began in 1973 and peaked in 1975, with a migration gain of over 30,000 persons. The average annual rate of population change during this period leaped to 6.6% per year. At the completion of pipeline construction, the boom was followed by a recession during the 1977-80 period. The result was a population loss of about 6,400 people between 1977 and 1978. The net loss of people due to out-migration in that year was more than 13,400. The annual rate of change over the four-year period, however, averaged a positive 0.6% per year.

Between mid-1980 and mid-1985, Alaska experienced its largest economic boom. Rapid growth resulted from construction and infrastructure development fueled by a combination of state spending based on oil revenues, major federal expenditures, and private development. As a result, Alaska's population grew by a phenomenal 25% in five years, making it the most rapidly growing state in the nation. The most growth occurred in the 1981-83 period during which the annual rate of change averaged 6.8% per year. The pace of growth began to slow during 1983-84, with a rate of change of 4.8%, and declined further in 1984-85 to 3.6%.

From 1985-89, Alaska experienced a recession similar to that of 1977-80, but more severe, as a result of falling oil prices combined with declining crude oil production. During the period of the retrenchment in 1986-87, population declined at the rate of 1.8%. The cumulative loss of persons to net out-migration in the period 1985-89 was about 45,900 persons, as compared to a net out-migration of 20,400 during the post-pipeline period. This population loss was equal to about 8.3% of the state's peak 1986 population. This loss would be proportionally equivalent to the loss of Spokane to the state of Washington or the loss of the San Diego metropolitan statistical area to California. By 1989, net out-migration slowed enough to allow the natural increase of births over deaths to produce the first increase in population since 1986. In the final analysis, the average annual rate of population increase for Alaska during the period from July 1, 1980, to July 1, 1990, was 2.8%, whereas for the United States during that period change averaged just 0.9% per year.

From 1990-2000, the state's population continued to increase. Population growth averaged 1.3% annually, ranging from a low increase of 0.2% during 1994-95 to a high of 3.0% during 1991-92. Since 1993, it has been natural popu-

lation increase, or more births than deaths, that has provided the major stimulus for growth. Alaska still has one of the highest rates of natural increase in the nation, but as in the nation as a whole, birth rates are currently falling. Because of the substantial declines in military and dependent population due to base closures and reorganizations during the mid 1990s, Alaska experienced a period of net out-migration. The military movements were large enough to offset any civilian immigration during this period. During the late 1990's, the extremely good economic opportunities in the states which have traditionally provided most of Alaska's migrants, combined with Alaska's lack of growth in income and the continued high cost of living, dampened in-migration to the state relative to levels seen in the early 1980s and 1990s. With the national economic downturn of 1999, most movement nationwide declined. With the decline in opportunities in Alaska's feeder states, in-migration became positive for the first time in 2001-2004 for the first time since the early 1990's. From 2004 to 2008, net migration was negative; however, for the 2008-2009 period there was a net in-migration of 2,261 people.

Factors Which Influence Change

The overall prosperity of Alaska in terms of revenues, as in the past, remains heavily dependent upon demand for its natural resources both at home and abroad. Government spending and policy decisions also have a substantial effect on the economy and population growth in Alaska. Government remains Alaska's largest primary employer. In 2009, about 26.2% of Alaska's total labor force was directly employed by the military, federal, state, and local government. Reductions in federal agency spending, state operating revenues, and loss of revenue sharing to local communities are all part of a trend that has slowed Alaska's economy and overall population growth in the past. The largest positive growth sector in employment since 1990 has been in the service sector. In almost every area, Alaska no longer can offer attractive salaries relative to Washington, California and Oregon.

Major expenditures on privately funded, federal- and state-sponsored construction, while beneficial to the state's economy in the short term, generally have caused only a temporary surge in population. Rapid expansion has historically been followed by economic downturn. Alaska, like most western states, is likely to continue to exhibit a "boom-bust" element in its economy for many years to come.

Alaska's population has increased more than six-fold since 1946. Despite fluctuations in population growth in Alaska, the overall trend during

the post-World War II period has been one of positive growth. While Alaska is currently attempting to achieve a more stable and balanced type of economic growth, its economy is still largely dependent on natural resources, especially oil and gas.

The physical resources of this state will continue to be unique. Demand to extract Alaska minerals such as oil, gas, gold, and coal should remain strong. Fishing and forestry will continue to play a modest and probably declining role in Alaska's future. Tourism continues strong and brings demands for increased access to the scenic beauty of the state. Beyond the economic considerations, the intangible quality of Alaska as a place of wilderness, beauty, and a unique way of life will continue to attract some migrants to the last frontier.

Components of Change

Population change is made up of natural increase (births minus deaths) and migration, as shown in Table 1.1 and Figure 1.2. Natural increase is the fairly stable component of population change. In general, birth and death trends do not change quickly. Migration is the unstable component of population change in the state, often changing dramatically from one year to the next.

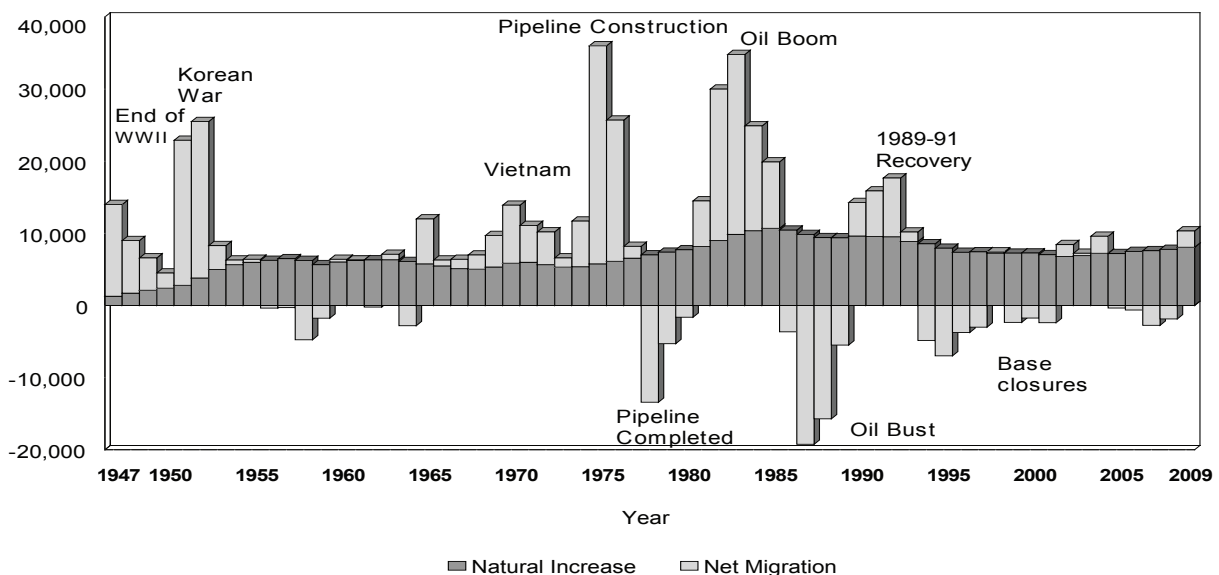

Births and Deaths

Nationwide fertility rates declined from the 1970s to mid-1980s. In the latter 1980s this trend reversed. From a nationwide low in 1987 of 1.8 children per family, fertility increased to a 1990 high of 2.1 children per family. This increase was primarily the result of increased fertility for older baby boom women who had postponed marriage and childbearing. Alaska's fertility rate has always been well above the national average. In 1990, Alaska had one of the higher levels of fertility among the states, with 2.6 children per family. Decade trends in crude birth rates for Alaska, its boroughs and census areas can be seen in Table 2.3. Following a brief increase in birth rates around 1990, birth rates have declined somewhat in Alaska and nationwide. In 2009, Alaska's fertility was about 2.4 children per family, up slightly from 2.3 in 2004.

Between July 1, 2008 and July 1, 2009 an estimated 11,454 persons were born in Alaska and an estimated 3,378 persons died, a net natural increase of 8,076 persons. This translated into a growth rate of 1.2% as a result of natural increase. Births were equivalent to about 1.7% of the population. Approximately 0.5% of the population in Alaska died.

Most of the growth in Native American population was due to natural increase. Birth rates

Figure 1.2
Components of Population Change for Alaska, 1947-2009

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit

among Native Americans have traditionally been very high. In 2008-2009, the crude birth rate for Native Americans was 26.8 per 1,000, increasing from 22.1 per 1,000 in 2005-2006. The crude death rate was 7.2 per 1,000 for a natural increase of 2.0% per year. In 1970, the average number of children for Native American families was 4.6. The number declined to a low of 2.7 in 1976, but has slowly risen after that year. The average number of children in 1990 had returned to a peak of about 3.9 children per family. In 2008-2009, the average Native American household in Alaska had declined to 2.6 children per family.

In contrast, the size of White families in Alaska generally has been relatively stable since the mid-1970s. The crude birth rate for Whites in 2008-2009 was 14.4 per thousand, and the crude death rate was 4.8 per thousand, for a natural increase of 0.96%. The average number of children reached a high of about 2.3 per family in the early 1980s and rose higher still to 2.4 in the early 1990s. The low point for White fertility came during the economic recession of the late 1980s, when White families were averaging close to 2.0 children per family. White fertility in 2008-2009 is 2.1 children per family.

Figure 1.3
Migration to/from Alaska by US Region, 1990-2000

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit

The crude birth rate for African-Americans in Alaska in 2008-2009 was 17.4 per thousand, and the death rate was 3.6 per thousand, a natural increase of 1.4% per year. Similarly, the crude birth rate for Asians was 29.0 per thousand, and the death rate was 3.8 per thousand, for a natural increase of 2.5%. Crude birth rates for Hispanics were 22.0 per thousand and crude death rates were 1.6 per thousand, for a natural increase of 2.0%. The highest birth rates and rates of natural increase are currently found among Asians, Native Americans and Hispanics.

Historical Migration to and from Alaska

As seen in Figure 1.2, migration to or from Alaska has varied widely from year to year. There is no typical migration trend for the state. Rapid growth occurred during and after World War II, represented by an influx of 12,710 persons, or a 12.7% rate of proportional growth due to migration for 1946-47. The highest post-World War II proportional growth due to migration occurred during the build-up for the Korean War in 1950-51 with in-migration of 20,100 persons producing a 14.7% rate of growth; and in 1951-52, with 21,680 immigrants resulting in a 13.6% growth rate. These high percentages were partly related to the small population base in these years.

Figure 1.4
Migration to/from Alaska by US Region, 2006-2008

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit

While the net migration for 1981-82 and 1982-83 was numerically larger than that for 1950-51 and 1951-52, it was proportionally much smaller. By 1983-84, the net influx of 24,900 immigrants accounted for only a 5.0% increase in the population.

The largest single numerical increase due to migration, 30,222 persons, or an 8.7% growth rate, occurred during pipeline construction in 1974-75. A severe economic recession led to the largest numerical loss, 19,245 out-migrants or a -3.5% population decrease, in 1986-87 and was larger than the 13,414 out-migrants, or -3.2% loss, which occurred at the end of the pipeline construction in 1977-78.

Historically, the majority of growth from migration in the U.S. occurs in relatively few of the 3,141 counties. Most communities in the U.S. attract relatively few in-migrants each year. Nationally, the highest rates of movement are found among young adults in their twenties. About one-third of persons 20-29 years old moved the previous year. This rate was twice the annual rate found for all persons one year and over. The movement of persons in their twenties also accounts for the fact that about a quarter of all persons less than five years of age also moved in the previous year. Most of the movement of young adults is to college, military or first job. Moving rates continue to decline with increasing age.

Recent Migration Trends and Characteristics

Statistics on the movement of people between states and counties are derived from change of address on U.S. Internal Revenue Service tax returns. Alaska tends to have among the highest levels of migration to and from the state, and thus gross migration, of any state in the union. Information on the characteristics of migrants is derived from the 2000 census. Migration to and from the state is partly dependent upon federal military and program policies, which tend to result from unique historical events rather than easily predictable trends. The overall economies of the Pacific and Mountain regions relative to that of Alaska strongly influence migration to and from this state. When employment in Washington, California and Oregon becomes relatively weak, there is a greater tendency to look to Alaska for opportunity and vice versa. As shown in part in Table 1.2, changes in migration to or from Alaska are more a result of the decline of migrants to Alaska than to changes in out-migration. A net loss or gain may result from an increase or decrease in the number of in-migrants relative to out-migrants. The higher the rate of gross migration, or turnover, the more unstable the population. Thus, one cannot always tell by observing what appears to be a net gain or loss of population whether changes of in-migration or out-migration are the cause. What appears to be massive out-migration may be a normal six to seven percent out-migration with a sharp decline of in-migrants to the state.

Most of the fluctuation of migrants is accounted for by non-Native migration to or from the state. While there has historically been a moderate migration flow of Alaska Natives to and from the state each year, the flows have been fairly balanced. The net effect has been very little gain or loss of Alaska Natives as a result of migration outside the state.

Source: IRS State to State Migration Flows and Alaska Department of Labor and Workforce Development, Demographics Unit.

The vast majority of all persons living in Alaska at the time of the 2000 census were migrants to Alaska. Only 38.1% of Alaskans were born in the state. Regionally, these proportions varied from a low of 25.0% born in Alaska in Aleutians West Census Area, which was dominated by the highly transient city of Unalaska, to a high of 94.1% for Wade Hampton Census Area. Generally, over 75% of the residents of rural Alaska were born in Alaska, compared to 32.1% for Anchorage, 29.5% for Fairbanks and from 33 to 38% for Matanuska-Susitna, Kenai and Juneau. For persons not born in Alaska as of 2000, 23.2% were born in the West, 13.5% in the Midwest, 11.2% in the South, and 6.5% in the Northeast. Another 1.3% were born abroad to American parents, and 5.9% of Alaskans were foreign born. The proportion of foreign born in 1990 was 4.5%. This increase reflects, but is lower than, the general U.S. trend.

In 2000, 11% of all persons in the U.S. were foreign born. Similarly, 2.7% of all Alaskans were not U.S. citizens compared to 6.6% for the U.S. as a whole.

Gross migration is the total volume of migration to and from the state that occurs in a year. This is the statistic often used by businesses that depend on turnover of population for their activity, such as shipping companies, moving companies and realtors. These flows are shown in Tables 1.2 and 1.3 and Figure 1.3 and 1.4. Even without counting the seasonal workforce, Alaska had the third highest level of gross migration (14.0%) of any state in 2008, the latest year of available data; slightly lower than in Wyoming (14.5%), and slightly higher than Nevada (12.5%). The District of Columbia (21.6%) was significantly higher. The average for all states is 7.8% and the

Average Annual Estimated Migration	100.0% 88,606	100.0% 79,226	100.0% 82,509	100.0% 89,140	100.0% 85,825	100.0% 96,889

lowest gross migration is found in Wisconsin, Ohio, Michigan and California who range from 4.8% down to 4.0%. Alaska's resident population continues to have a very transient component.

During the 1980s, gross migration ranged from a high of about 110,500 during 1985-86 to a low of about 84,500 in 1987-88. On average during the 1980s, gross migration represented a number of migrants equal to 18.9% of the state's population each year. The range was between 15 and 22%. Each year between 1980 and 1990 the number of in-migrants averaged 9.9% of the state's population. This number ranged from a low of 6.2% to a high of 13.6%. Similarly, an average number equal to 9.0% of the state's population left Alaska each year. Out-migrants ranged from a low of 8.3% to 10.3% of the population. Armed Forces rotation probably accounted for one-fifth

of these migration flows statewide each year. Flows to or from certain states with key bases are a regular part of the overall migration to or from Alaska, and in some instances strongly influence the importance of certain states in the pattern of migration to or from Alaska.

Since 1995, in-migration flows have averaged 6.3% of the state's population. The rate ranged from a high of 6.9% in 1996-97 to a low of 5.7% in 2000-2001. Out-migration averaged 6.5% during the same period. The movement out of state varied from a high of 7.7% in 1994-95 to a low of 5.9% in 2001-2002 reflecting the then-current lack of economic opportunity in our feeder states. The gross migration rate for 2000-2001 was 11.7%. The general trend over time has been towards lower gross migration to and from Alaska since the early 1980s. This rate has declined steadily from a high of 22.8% gross migration in 1981-82. The general slowdown of migration during the 1990s reflected economic conditions, both within the state and nationwide. If jobs and economic opportunity are available close to home, the tendency to relocate in search of work is diminished. The recent recession slowed migration from Alaska, with little corresponding increase in the rate of migration to Alaska. The increase of gross migration for 2008-2009 to 13.3% mostly reflects an increase in in-migration due to military.

Migration to and from Alaska by geographic region of the United States has been relatively consistent over time. During the 1980s, Alaska's average gross migration was 49.6% with the West, 27.4% with the South, 13.9% with the Midwest, and 6.6% with the Northeast. These regional proportions generally varied by less than two to three percentage points over the course of the decade as shown in Table 1.3.

In 2006-2008, the most recent period for which Internal Revenue Service data are available, 43.6% of gross migration was between Alaska and the West, of which 25.3% was with the Pacific states and 18.3% to or from the Mountain states. Of the Pacific states, Washington accounted for 10.3%, California 8.1% and Oregon 4.8% of the migration. In the 1980's 49.6% of the migration to Alaska came from the West: 34.4% from the Pacific and 15.3% from the Mountain states. The share to and from

Washington and California has tended to decline slightly over time and the share with the southern Mountain states has tended to increase.

Similarly, in 2006-2008, the South increased to 32.9% of Alaska's gross migration. The migration to and from the South had remained relatively stable since 1990. Of the Southern flows in 2006-2008, 16.3% were to or from the South Atlantic region, and 12.1% were to or from the West South Central region. Most of this migration is associated with the military. The single southern state contributing most to Alaska's migration was Texas with 7.9%, a flow jointly associated with the oil industry and the military. In 2006-2008, migration to and from the Midwest was 13.5%, down from 13.9% in the 1980's. Migration to and from the Northeast was 5.8% in the 2006-2008 period, down from 6.6% in the 1980's. Alaska's migration to or from foreign countries has steadily increased from 2.5% in the 1980s to 4.1% in 2006-2008. This movement is largely a combination of immigration and military rotations to or from overseas bases. Foreign im-

migrants, who currently number about 1,200 per year, have continued to be a larger share of all migration to Alaska since 2000. In 2000, 5.9% of the population of Alaska was foreign born, 2.7% of the population were not U.S. citizens and 3.2% naturalized citizens.

Population Composition: Historical Race Composition

Prior to the 1929 territorial census, little reliable data is available on Alaska's Native Americans. In 1929, some 29,983 Native Americans made up 50.6% of the state's population. Although their numbers have grown rapidly since 1929, the non-Native population has grown more rapidly, resulting in a gradual decline in the proportion of Alaska's population who are Native American. Since 1990, however, the proportion of Native Americans has slowly increased from 15.7% to about 17.5% in 2000 (Table 1.4) as a result of military cutbacks and the overall slowing of non-Native migration to Alaska.

In the late 1990s, the Federal Office of Management and Budget (OMB) redefined the way race is collected to allow individuals to define themselves as "multi-race". With the 2000 census, people could check all of the races that they thought defined them. As a result, race as reported in 2000 is no longer compatible with earlier data and statistics on race are far more complex. In recent decades, one had to choose one of four races: White, Black or African American, American Indian or Alaska Native, or Asian and Pacific Islander.

The new OMB guidelines establish a five race classification for federal race data on race and ethnicity. It also allows for identifying origins in more than one race.

Sources: U.S. Census Bureau, 1990 and 2000 Census of Population and Housing; and Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit

American Indian or Alaska Native A person having origins in any of the original peoples of North or South America (including Central America), who maintains tribal affiliation or community attachment.

Asian A person having origins in any of the original peoples of the Far East, Southeast Asia or the Indian subcontinent, including Cambodia, China, Japan, Korea, Malaysia, Pakistan, the Philippines, Thailand and Vietnam.

Black or African American A person having origins in any of the black racial groups of Africa. Terms such as "Haitian" or "Negro" can be used in addition to "Black or African American."

Native Hawaiian or Other Pacific Islander A person having origins in any of the original peoples of Hawaii, Guam, Samoa or other Pacific Islands.

White A person having origins in any set of the original peoples of Europe, the Middle East, or North Africa.

With respect to ethnicity, the standards provide for the collection of data on whether or not a person is of "Hispanic or Latino" culture or origin. A person of Cuban, Mexican, Puerto Rican, South or Central American, or Other Spanish culture or origin can identify themselves as such, regardless of race. The term "Spanish Origin," can be used in addition to "Hispanic or Latino."

Under the new guidelines, OMB provides for multi-race reporting. This allowed persons of mixed race to identify themselves as a combination of races rather than being forced to choose one race. The permutations and combinations of five races result in 63 possible race/ethnicity categories. In the 2000 census, race is self reported and represents each individual's interpretation of the choices presented. In addition to the race and ethnic categories recognized by OMB, the census allowed people to define themselves as "some other race" and to write in their race. Most often the "some other race" response involved confusion over Hispanic or Latino as a race rather than an ethnicity. To make data comply with federal program uses the Census Bureau has created a new set of modified race

estimates that allocates "some other race" to the OMB categories. In 1990, the bureau created a Modified Age, Race, Sex (MARS) file to correct for errors in race and age reporting. The bureau has created a comparable set of estimates from the 2000 Modified Race to distribute the "other race" and our office has modified it further to correct for age errors in the 2000 census in Alaska.

The changes in the definition of race make 2000 race data incompatible with prior censuses. There is no longer a direct answer to "How many Alaska Natives live in Alaska?" Because of multi-race, the answer must be in the form of a range rather than a single number. The number of American Indians or Alaska Natives who declared one race alone in 2000 was 98,043 or 15.5% of the population. The number of American Indians or Alaska Natives who declared this race alone or in combination with one or more races was 119,241 or 18.1% of the population. Alaska had the second highest proportion of multi-race in the U.S. after Hawaii.

As of this date, figuring rates of occurrence for births, deaths and other social and work related programs is also more difficult because data on these characteristics are not yet collected on a multi-race basis. In addition, most federal programs that use race have not yet revised their requirements to define how they will deal with multi-race. The use of current incidence statistics not collected on a multi-race basis with multi-race denominators will produce misleading rates. In addition to multi-race estimates, our office produces "bridge" series race estimates which define race as it was defined in the 1990's. Until numerator data is produced on a multi-race basis we recommend that anyone producing incidence rates use the "bridge" series denominators. For a more extensive discussion of multi-race, the reader is directed to Greg Williams' *Race and Ethnicity in Alaska*, Alaska Economic Trends, October 2001.

In addition to the problems of race in the 2000 Alaska census, problems in processing the 2000 census have led to problems of misrepresentation of age for children under 18. The problems are particularly noticeable in rural Alaska. The basic census form used in door-to-door enumeration allowed for only 5 household members to respond (six on the mail-out form). If the household was larger, the persons were listed on the back and a supplementary form was used for the characteristics of the additional persons. In the processing, the private data contractor separated the supplementary forms and the connecting information was lost. This meant that the age of children less than 18 years of age had to be "imputed" for a substantial number of children based on the age distribution of similar households by a

method statisticians refer to as a “hot deck.” The method assumes that people list their children on the census form in random order, rather than sequentially. In fact, most persons listed their children in age order. As a result, a large number of children whose age had to be imputed were young children rather than a normal distribution by age under 18 years of age. The result was that for parts of rural Alaska with large households, the census reported too many children ages 10-17 and too few children 0-9. The problem is particularly acute for ages 0, 1 and 2. Ten census areas had errors of at least 6%. In Wade Hampton, we estimate that 16% of the children had misreported age and Bethel had almost 15%. We have adjusted the age structure of 10 rural Alaska boroughs and census areas and the state total to correct for this problem. Users of 2000 census data for children by age group should be aware that the data for rural Alaska as reported in census tables may be inaccurate. Data for children under 18 as a whole should be accurate. Children were not missed by the census, but their reported age may be in error. The corrected areas are: Wade Hampton Census Area, Bethel Census Area, Dillingham Census Area, Nome Census Area, North Slope Borough, Valdez-Cordova Census Area, Northwest Arctic Bor-

ough, Yukon-Koyukuk Census Area, Southeast Fairbanks Census Area and Lake and Peninsula Borough. Since large families in these areas are predominately Alaska Native, the correction was applied only to the American Indian and Alaska Native race group. There also appears to be a small erroneous imputation of sex as well in ages 0, 1 and 2 for Alaska in the 2000 census. Because of time constraints, we have not attempted to correct for this error in this set of estimates.

Looking at 2000 census data before adjustment to distribute “Other Race,” the census showed that 192,398 persons, or 30.7% of the population of Alaska, considered themselves to be either wholly or partly some race other than White. The number and proportions of persons by race and broad tribal group for 1980 and 1990 are shown in Tables 1.5 through 1.7. Of the 626,932 persons in Alaska in 2000, Native Americans Alone made up 98,043 and of the 658,723 race responses; the number of persons reporting Native American Alone or in Combination was 119,241. For these estimates, all Native Americans living in Alaska are referred to as Alaska Natives, even though a small percentage of them belong to continental U.S. tribal groups. About 20% of all Alaska Natives are estimated to be living outside of Alaska. The economic boom of the early 1980s brought many non-Natives to the state. As a result, the proportion of Alaska Natives dropped from 16.0% in 1980 to 15.7% in 1990. By 2000, the percentage of Native Americans was between 15.6 and 18.1%. Alaska Natives made up 4.4% of all Native Americans nationally in 1990. In 2000, Alaska American Indian and Alaska Natives (AIAN) in Alaska made up 4.0% of AIAN Alone and 2.9% of AIAN Alone or in Combination nationwide.

In 2000, the White population accounted for between 434,534 and 463,999 persons, or 69.3% to 70.4% of the population. Other races, primarily African-American, Asian and Pacific Islanders accounted for at least 9.6% of the population in 2000. These groups accounted for 48,853 persons, or 8.9% of the 1990 population. These groups were up from 27,521, or 6.8%, in 1980. In 1990, there were some 17,803 persons of Hispanic origin in Alaska. In 2000, the number had increased sharply to 25,852 Hispanics (4.1%).

Current Population Composition

The July 2009 state estimates are based on the April 1, 2000, Modified Age, Race (MARS) estimates. As stated earlier, the MARS estimates adjust the census race data to eliminate “other races” and adjust for errors in age reporting at the time of the census. The 2009 estimates by age and sex for single year of age for the state as a whole are presented in Table 1.8. The 2009

Figure 1.6
Alaska Population by Age and Sex, 2000, 2009

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit

estimates by age/race/sex and ethnicity for the state as a whole are presented in Tables 1.9 and 1.10. Similar tables for the state's 29 boroughs and census areas are available from the Alaska Department of Labor, Research and Analysis Section, Demographics Unit web site <http://laborstats.alaska.gov/> under Population Estimates and Projections.

Tables 1.9-1.28 contain population for the entire state by age, race and sex for 2009 back to April 1, 2000 respectively. Tables for "race alone or in combination" count responses, not individuals. In these tables, a person who marked two or more race categories was counted two or more times, so that the total is higher than the state population. These tables are for selected age groups. Tables for "races alone" and "alone or in combination" by single year and the "bridged" race estimates for these years by single year of age are available on our website.

The size of each age group in the population is affected by its birth, death and migration history. These patterns can be seen in Figures 1.5 and 1.6. For Alaska, the largest factor affecting change in the size of each age group is migration. Migration is particularly high for 18-to-35 year olds and their young children under school age. Migration began to increase sharply during the 1970s. This accounts for much of the dramatic increase in persons currently over 40. The large bulge at ages 40-55 was created by the 1980-90 migration to Alaska. The age structure of Alaska's population compared to that of the U.S. as a whole can be seen in Figure 1.7.

Population Cohorts and Life Cycle Events

The shape of a population depends upon a series of historical and life cycle events. All persons born in a given year are part of a year-specific cohort, and are associated with one another throughout their lifetime. The increase in family size following the depression and WWII created a series of cohorts that is widely known as the "baby boom." These larger groups of children strained schools at every level as they passed, experienced reduced job opportunities as they entered the labor market, and will overwhelm the social security system and medical systems as they grow old. Cohorts in local areas are shaped over their lifetime by death and migration. They are increased by forces encouraging in-migration. They are reduced by forces of death and out-migration.

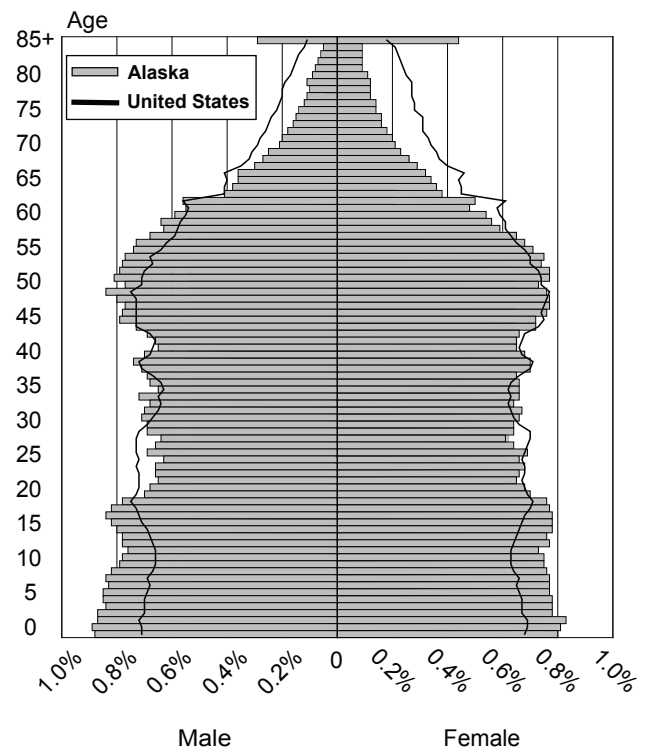

Specific Age Groups

The growth trends for various age groups often differ sharply from those of the population as a whole. These differences in age groups are found in Table 1.29 and Figure 1.8.

While Alaska's total population increased 25.2% between July 1, 1990 and July 1, 2009, children under the age of five increased 3.6%, from 55,859 to 57,899. This age group currently makes up 8.4% of the state's population. From a high in 1993, the number of young children steadily declined to a low of 48,525 in 2000, rising slowly but steadily over the last nine years. The number in this age group is extremely volatile, and is often depending on various economic conditions. Children under five are generally unreliable as a planning indicator for future elementary school facilities, because economic booms and busts can quickly change the size of this age group. As a result of cutbacks in military personnel in the mid 1990's, low birth rates nationwide in the 1970s, and low in-migration, the state has few young adults, and this has acted to reduce the number of young children in the state.

The population aged 5-13 are of elementary and junior high school age. This group has shrunk by 3.1% since its peak of 101,208 in 1998. Young adults age 18 in 2009 represent the peak of the "echo boom," that is, they are the children of the last of the baby boomers. Peak baby boomers born in the late 1950's and 1960's tended to get

married later and postpone childbearing. Since the largest cohort of “echo boom” kids is just graduating from high school, the growth demand for middle and high school facilities has stabilized statewide. This age group made up 14.0% of the state population in 2009.

The number of high school-age children had increased steadily since 1990. By 2009, there were 43,848 youth aged 14-17 in Alaska, up from 30,356 in 1990. This age group has increased from 5.5% of the state’s population in 1990 to 6.3%

in 2009. The highest proportion since the 1970s was in 2005, when 7.0% of the state’s population was 14-17. In general, teenagers are less subject to changes in migration flows than younger age groups because their parents are older and generally have more stable jobs. Cutbacks in long-standing oil and government jobs, however, could negatively impact this group. Except for rapid growth areas like Mat-Su, the number of high school students should stabilize or decline within the next few years.

The age group 18-24 is most subject to change by increases and declines in economic conditions. While nationwide this group was declining, in Alaska it reached a high of 70,175 in 1984. Since 1984, this group decreased to 56,189 by 1990, a loss of 20% in six years. In 1995, this age group hit a low point at 47,656. Cuts in the military population have also influenced the downward trend in this age group. This group has seen the passing of children born following the end of the baby boom in the early 1970s when fertility hit an all time low. While some have mistakenly inter-

preted the decline in the size of this age group to out-migration from Alaska, the trend in the size of this age group is in fact primarily a result of the passing of the “baby bust” cohorts through their early 20’s. Since 1995, this group has increased steadily with the passing of the leading edge of the “echo boom” into these ages. Until the recent economic recession, this group had generally had better economic prospects than their predecessors. The decreased supply of labor provided by this smaller generation provided an opportunity to increase the employability of this age group. Given the current economic downturn, unemployment would be worse for this age group had their numbers been larger. This age group made up 9.9% of the state’s population in 2009.

The population aged 25-34 is composed of young adults in the prime ages for family and household formation. It is estimated that this age group peaked in Alaska at 128,401 in 1986. The last part of the “baby boom” has now passed through this age group and these ages increasingly are made up of “baby bust” cohorts. The families in this age group contribute heavily to the number of children less than five years of age. By 1990, the persons in this age category numbered 113,233, a loss of 11.8% of young householders since 1986. This age group hit a low of 84,518 in 1999, and has since rebounded slightly to 92,183. As the “baby boomers” moved out of it, this age group declined from 23.7% of the state’s population in the early 1980s to 13.3% in 2009.

From 1980 to present, the 35-44 age group experienced large growth, followed by a decline in size. This change is largely associated with the advancement in age of the “baby boom” generation, defined as individuals born between 1946 and 1964. In-migration by more established families during the 1980s added to the numbers of this naturally large population cohort. In spite of overall losses in the state’s population due to the severe economic recession in the 1986-87 period, this age group continued to grow, reaching its highest level of 120,566 persons in 1996. From almost 20% in the mid 1990s, this age group has declined to 13.6% of the overall population in 2009.

The 45-54 age group currently includes a large portion of the post World War II “baby boom” generation. This age group segment of the population grew in Alaska from 8.5% in 1980 to 15.4% in 2009. As of July 1, 2009, there were an estimated 106,922 persons 45-54 years old.

The ages 55-64 have traditionally been the ages at which some Alaskans begin to move south. This age group’s share of Alaska’s population has shown steady increases since 1983 as their numbers have increased by over 100%. This growth should continue in Alaska over the next

10 years as baby boomers begin to enter their sixties. There were 78,641 persons aged 55-64 in the state in 2009 which accounted for 11.4% of the population.

Persons 65 years old and older numbered 52,263 in 2009. The size of the population currently 55-64 suggests that the number of senior Alaskans will continue to increase dramatically in coming years. Large numbers of persons over age 40 are also reaching the point in the life cycle where they are beginning to have older parents to care for. Such care, in some cases, is more easily provided in Alaska than by long distance in other states. In-migration of older persons

to Alaska, however, remains a very tiny part of either growth or migration. This age group has increased from 2.9% of the total in 1980 to 4.1% in 1990, to 7.5% in 2009. The rate of Alaska's increase in this age group tops that of any other state. In spite of the rapid rate of increase, Alaska in 2000 had by far the smallest proportion of persons 65 and over (5.7%) in the nation. The next smallest percentage was in Utah (8.5% in 2000). The percentage of the population over 65 for the U.S. in 2009, was 12.9%. According to Census 2000, Alaska has the third highest rate of out-migration of its elder population after Washington D.C. and New York. Between 1995 and 2000, there was a net loss of almost 4% of

persons 65 and over. Net loss of older Alaskans is somewhat less today than it was during the economic downturn of 1985-90, when the loss was about 5.5%.

Median Age

The population in Alaska is younger than the national average but, because of recent slowing of migration, this gap is narrowing. The 2009 median age in the United States was 36.8, while the median age for Alaska was 33.5 years. By race, the median ages of Alaskans in 2009 are: White Alone 36.4, Native American Alone 26.6, African-American Alone 29.3, Asian Alone 36.7, Hawai-

ian and Pacific Islanders Alone 23.8 and Two or More Races 16.3. The median age of Hispanics is 26.0. The Native American, Hawaiian and Pacific Islanders and Hispanic populations are much younger because of their higher fertility rates. The African-American population is young because it is largely military. The extremely young age of persons of Two or More Races is the result of an increasing proportion of multi-racial children and a greater tendency of younger Alaskans who may be multi-racial to identify themselves as such. The 2009 median ages by race for the United States as a whole were: White Alone 38.3, Native American Alone 29.5, African-American Alone 31.3, Asian Alone 35.3, Hawaiian and Pacific Islanders Alone 29.9 and Two or More Races 19.7. Nationwide, the median age of Hispanics was 27.4. In 2009, Alaska had the third youngest population in the U.S., after Utah (28.8) and Texas (33.0).

Voting Age Population

According to the July 1, 2008 estimates, the voting age population (persons aged at least 18 years) in Alaska totaled 482,842. Of that population, Whites made up 477,390 (70.2%), Alaska Natives 109,116 (16.1%), Asian 28,610 (4.2%), African-Americans 26,223 (3.9%), Hawaiian and Pacific Islanders 3,872 (0.6%) and Persons of Two or More Races 34,509 (5.1%). Hispanics may be of any race. In 2008, there were an estimated 28,797 voting-aged persons of Hispanic origin. This number is equivalent to 4.2% of the voting age population. As of December 2008, there were 497,682 registered voters in Alaska. Thus, a number of registered voters equivalent to 103.1% of the eligible voting age population are currently on the voter registration rolls, up from 98.4% in 2005. While Alaska attempts to purge voter registration rolls, a 14% gross migration each year means that the number of persons on the registers is not a valid measure of the proportion of eligible voters who are registered. Approximately 65.3% of the voting age population voted in the presidential election in 2008. More detailed data on age of population by election district are shown in Table 3.4.

Dependency

Dependency ratios show how large a burden of support is placed on the working age population by the young and the old. In 2009, every 100 Alaskans of working age supported 45.4 children under 18 years of age (unchanged from 2008) and 11.9 persons over 65 (up from 11.4 in 2008) and a total dependency of 57.2. In 2009, every 100 persons of working age in the United States as a whole supported 38.6 children and 20.5 persons over 65 for a total dependency of 59.1.

Thus, working Alaskans have a lower dependency burden than the average American because of the lower burden of elders. It is important to note that the dependency burden for White Alaskans is far less than that for Alaska Natives. Every 100 Alaska Native persons of working age must support 69.3 additional persons compared to 51.8 for Whites. This added burden is made worse by the higher unemployment, lower labor force participation and lower incomes of many Alaska Natives.

Male/Female Composition

In July of 2009, an estimated 339,093 persons, 49% of Alaska's population, were female, compared to 50.7% nationwide. Considered another way, there were 104.2 males for every 100 females in Alaska in 2009. By race, there were 105.8 White, 103.5 Native American, 103.4 African-American, 87.7 Asian, and 102.1 Pacific Islander males for every 100 females. The higher ratio for African-Americans tends to be a reflection of the larger number of young African-American males in the military. Other states with high male/female ratios from the 2000 census are Nevada 104, Wyoming 103, Utah 102, Colorado 102, Hawaii 102 and Idaho 101 males for every 100 females. While Alaska continues to have the lowest overall percentage of women of any state, the difference is quite small and has frequently been greatly exaggerated in the popular press. A few Alaska communities tend to be more heavily male because employment is transient or con-

centrated in occupations that traditionally have employed mostly males. Military installations, fishing and mining operations are the main sources of distortion of these ratios. Most communities, however, have male/female ratios more in line with the rest of the nation.

As shown in Figure 1.9, the highest ratio of males to females is in the age group 55-59 at 114.5 males per 100 females. Ages 60-64 are close behind with a ratio of 113.4 males per 100 females. The next highest male/female ratios by age occurred among the groups aged 0-4, 5-9, 65-69, 45-49, where the ratios were 110.6, 110.6, 110.2 and 109.3 respectively. These ages continue to reflect the male/female pattern of migration at an earlier period in Alaska history. The relatively young age of Alaska's population also adds slightly to the overall male proportion. States with significant older populations, like Pennsylvania (median age 38.0 in 2000), have more women because of the greater life expectancy among women. The male/female ratio in Pennsylvania during the 2000 census was about 93 men for every 100 women.

Alaska Households and Living Arrangements

The census counts all persons as living either in households or group quarters. A household occupies a housing unit. The census currently defines a housing unit as a house, an apartment, a group of rooms or a single room intended as separate living quarters. Boats, tents, vans, and

Figure 1.8
Alaska Population by Age Group, Selected Years, 1980-2009

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit

caves are included if they are occupied as a usual place of residence. Mobile homes are included provided they are intended for occupancy on the site where they stand. Seasonal residences, Forest Service cabins, or vacant cabins that are habitable are included in the inventory.

The 2000 census counted some 260,963 housing units in Alaska, with 221,599 occupied and 39,364 vacant. Some 21,460, or 8.2%, of all housing units were for seasonal, recreational or occasional use. In 1990, the census counted 232,608 housing units, with 188,915 occupied and 43,693 vacant and the percent of housing units used for seasonal, recreational or occasional use was 7.3%. There was an increase of 28,355 total housing units during the decade, or a growth of 12.2%. The number of occupied housing units or households in Alaska increased by 32,684, or 17.3%, during the decade.

Following the national trend, the number of persons per household in Alaska declined by 0.15 person, from 2.89 in 1990 to 2.74 in 2000. During the same period, in the nation as a whole, persons per household declined by 0.26 persons, from 2.63 in 1990 to 2.59 in 2000.

All persons not living in households live in group quarters. Two general categories of persons in group quarters are recognized: (1) institutionalized persons (such as those in prisons, nursing homes, psychiatric hospitals and residential treatment facilities) and (2) other persons in group quarters (such as those in group homes,

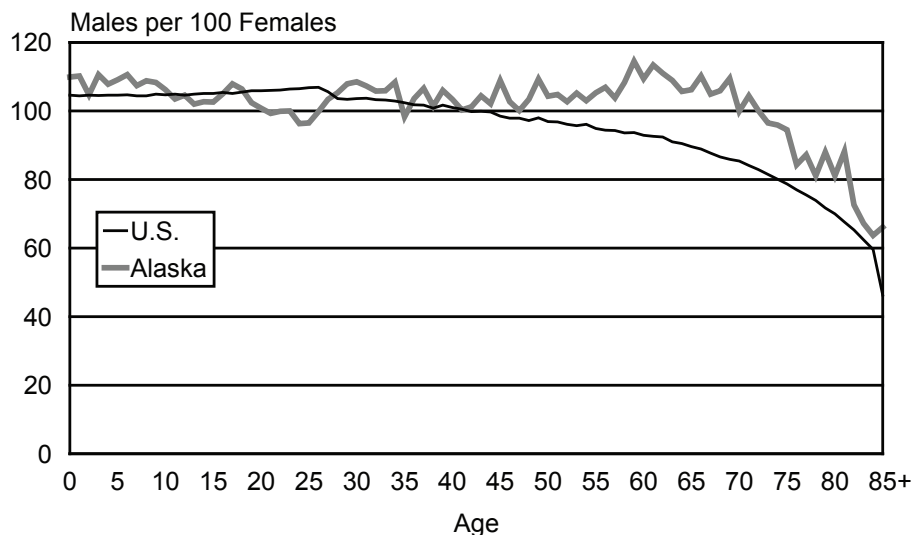

college dorms, military barracks, fish processing and logging camp bunkhouses and emergency shelters). Some 19,349 persons (3.1%) lived in group quarters housing in Alaska in 2000. In 2009, there were 21,083 persons living in group quarters in Alaska. A more detailed discussion of living quarters appears in Chapter 2.

As shown in Table 1.30, households are broken down into family households and non-family households. A household containing a householder and one or more persons related by birth or marriage makes up a family household. By census definition, not all households contain families. A household composed of two or more unrelated individuals or one person living alone is considered a non-family household. The number of persons in households is shown in Figures 1.10 and 1.11.

Some 607,583 persons lived in 221,600 households in Alaska in 2000. Of that population, 516,296 persons, or 85%, lived in 152,337 family households. The remaining 91,287 persons, or 15%, lived in 69,263 non-family households.

Overall, 68.7% of all households are family households and 31.3% are non-family households. In 2009, an estimated 252,526 households existed in Alaska. Of these, 169,926, or 67.3%, were family households and 82,600, or 32.7%, were non-family households. Households in the United States as a whole in 2008, the most recent year of data, were almost identical in their distribution: 66.3% family and 33.7%

Figure 1.9
Males Per 100 Females by Age, Alaska and the U.S., July 1, 2009

non-family. The proportion of persons in family households continues to decline nationwide.

Family household types are husband-wife, male-headed and female-headed households. A married couple household is a family in which the householder and spouse are counted as members of the same household. Male- and female-headed households consist of a single adult head and at least one younger or older related dependent. Of Alaska's 152,337 family households in 2000, 116,318 were husband-wife, 12,082 were male-headed, and 23,937 were female-headed. These comprised 50%, 5.2% and 10.3% of all households respectively. By 2009, it was estimated that there were 123,998 married couple households, 15,958 male-headed households and 29,970 female-headed households in Alaska. These made up 49.1%, 6.3% and 11.9% of all households in the state, respectively. Traditional husband-wife families continue to decline and today make up less than half of all households.

During 2008, the latest year for which national data is available, Alaska's households are about as likely to contain married couple families and somewhat more likely to contain a male-headed household with no spouse present than households of the nation as a whole. Nationwide, 49.2% of all households were married couples: 4.6% are male-headed, family households and 12.5% female-headed.

In 2007, the concept of household with children in families changed. The new concept looks at children in two parent families and single parent families to better reflect unmarried partners with children. In 2009, Alaska had 86,363 households with children. Of these households, 59,814, or 69.3%, were in two parent families. A single-female householder was present in 17,298, or 20.0%, of the households with children, and a single-male householder was present in 9,251, or 10.7%, of the households with children. Of all households containing children living with one parent in 2009, 34.8% were male-headed households and 65.2% were female-headed households.

In 2000 there were 88,484 households within Alaska with related children. Of these, 63,245, or 71.5%, were married couple families, 17,243, or 19.5%, female-headed families and 7,996, or 9.0%, male-headed families. Of all households containing children living with one parent in 2000, 31.7% were male-headed households and 68.3% were female-headed households.

In 2009, households containing two partners and children made up only 23.7% of the total households in Alaska, somewhat higher than the national average of 23.0% in that year. In part,

this reflects Alaska's younger population and higher fertility. Between 1990 and 2009, the proportion of households with children living with married couple families continued to decline, while the proportion of female- and male-headed households with children continued to increase. The number of male and female householders with related children have both risen, though the number and percentage of male-headed households has risen faster than the number and percentage of female-headed households.

Persons living alone or unrelated persons living together account for the non-family households. Of the 69,263 non-family households in 2000, 52,060 (23.5% of all households) contained persons living alone, and 17,203 contained unrelated persons living together. In 2009, of an estimated 82,600 non-family households in Alaska, 62,485 (24.7% of all households) contained persons living alone, and an additional 20,115 (8.0% of all households) contained two or more unrelated individuals. Nationwide from 2008, the latest year for which we have nationwide data, the proportion of households containing a single person living alone was 27.7%, and the proportion of households containing two or more unrelated individuals was 5.9%. Alaska's higher percentage of households containing two or more unrelated individuals may reflect our younger population.

Chapter 2

Alaska Boroughs and Census Areas

Introduction

This chapter presents detailed estimates of population by race, age, and male/female for all boroughs and census areas. There is detailed analysis of geographic variation for population trends, households, components of change, and population composition.

Boroughs and Census Areas

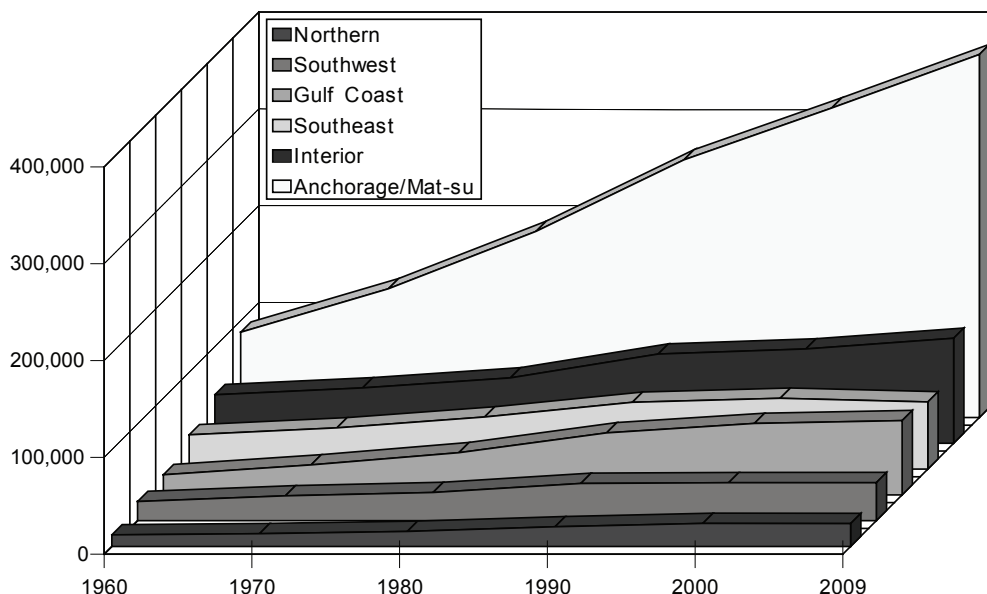

Alaska is made up of both organized boroughs and unorganized census areas. As of July 1, 2009, there were 18 organized boroughs within the state. Boroughs in Alaska are the equivalent of county governments in the rest of the United States. There are three types of borough governments, varying by the services they provide and their relationship with city governments. The Anchorage Municipality, the City and Borough of Juneau, the City and Borough of Sitka and Wrangell Borough are unified home rule municipalities, where the city government and borough government are merged. The other two classes of boroughs are distinguished by the level of services they are mandated to provide. These remaining 14 boroughs are not unified, and though most contain organized cities within the borough boundaries, some do not. Bristol Bay Borough,

Haines Borough and the City and Borough of Yakutat contain no incorporated cities.

The remaining unorganized territory, which accounts for about 59% of the state's land area, is divided into 11 census areas for statistical purposes by the U.S. Census Bureau. Although these are only statistical units, they are considered county equivalents by the federal government for federal program purposes. Many of the boundaries of the census areas tend to follow Alaska Native Regional Corporation (ANRC) and Regional Educational Attendance Area (REAA) boundaries. All of the census areas contain incorporated cities. Maps that accompany the place estimates in Chapter Four of this publication can be referred to for help in identifying borough and census area boundaries in Alaska.

Since there have been a number of recent borough formations, there is no direct historical comparison among all of the borough and census area boundaries. The boundaries of the Northwest Arctic Borough correspond to Northwest Arctic Native Association boundaries and include the 3,298 square miles of land transferred from North Slope Borough at the time of incorporation. No population was involved in this land transfer, so the historical series is still 100%

Figure 2.1
Population by Labor Market Region, 1960, 1970, 1980, 1990, 2000, 2009

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit

compatible with the Kobuk Census Area and North Slope Borough for 1980 onward.

The Aleutians East Borough and Aleutians West Census Area were formed out of the 1980 Aleutian Island Census Area and a small area of unpopulated land transferred from the 1980 Dillingham Census Area. Similarly, Lake and Peninsula Borough and the 1990 Dillingham Census Area were formed out of the 1980 Dillingham Census Area. At the time of its formation, a segment of the 1980 Dillingham Census Area containing 22 housing units, but no population, was annexed to the Kodiak Island Borough. In addition, a segment of the northernmost part of the 1980 Dillingham Census Area was transferred to the Aniak Census Subarea of the Bethel Census Area. This segment contained no population or housing units.

The Denali Borough, incorporated in December of 1990, was formed primarily out of the Yukon-Koyukuk Census Area and includes Denali National Park and all communities on the Parks Highway between Anderson and the Matanuska-Susitna Borough. The borough also included a small portion of Southeast Fairbanks Census Area which has no population.

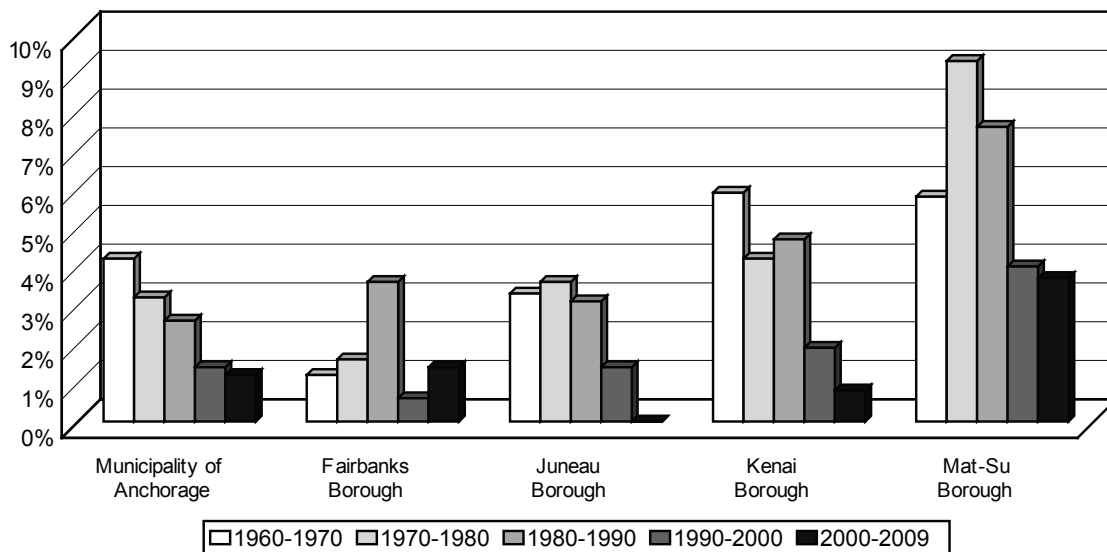

In 1992, Yakutat Borough was formed out of the Skagway-Yakutat-Angoon Census Area. The remaining area has been renamed the Skagway-

Hoonah-Angoon Census Area. In 1997, Yakutat Borough annexed an additional 2,878 square miles from the Valdez-Cordova Census Area. The incorporation of all the remaining unorganized territory into boroughs has been studied, public meetings held and a model borough plan developed by the Alaska Boundary Commission. Bills have surfaced almost annually over a long period in the Alaska legislature to complete the borough formation process, despite the opposition of many local unincorporated areas.

In 2007, The Municipality of Skagway was formed out of part of Skagway-Hoonah-Angoon Census Area. The remaining area consisting of Klukwan Census Subarea and Hoonah-Angoon Census Subarea is called the Hoonah-Angoon Census Area.

Wrangell Borough was formed in 2008 out of Wrangell- Petersburg Census Area and Meyers Chuck CDP from Prince of Wales-Outer Ketchikan. The remainder of Wrangell-Petersburg Petersburg Census Area was renamed Petersburg Census Area. Simultaneously, what remained of the Outer Ketchikan Census Subarea with the exception of Hyder CDP was annexed by Ketchikan Gateway Borough. The Prince of Wales Census-Outer Ketchikan Census Area has been renamed Prince of Wales-Hyder Census Area. Metlakatla remains a part of this new census area.

Figure 2.2
Average Annual Growth Rate, Five Most Populous Alaska Boroughs, 1960 to 2009

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit

Population Trends

Parts of Alaska have experienced phenomenal growth during recent decades, most of which has been centered in urban and suburban areas of the state. This is evident in Figure 2.1, which shows the dominance by the Anchorage/Matanuska-Susitna region over other labor market regions from about 1959 to the present. Table 2.1 together with Figures 2.1 and 2.2 illustrate the changing demographics during this period.

In 2009, 79.9% of Alaska's population was found in the following five boroughs: Municipality of Anchorage (290,588), Fairbanks North Star Borough (93,779), Matanuska-Susitna Borough (84,314), Kenai Peninsula Borough (53,578), and Juneau City and Borough (30,661). Figure 2.2 compares the growth trend of these boroughs by decade beginning in 1960.

Population growth in Alaska has been uneven in the last three decades. Between 1980 and 1985, the state grew at an average annual rate of 5.9%. During the economic bust between 1985 and 1990, the state only grew at a 0.3% annual rate. For the 1990-1995 period, Alaska grew at a 1.8% annual rate and for the 1995-2000 period, the average annual growth slowed to 0.8%.

The 2000-2009 period has seen an average annual increase in growth of 1.1% annually in the state's population. The majority of the state's growth occurred in the Anchorage/Matanuska-Susitna region with the Matanuska-Susitna Borough experiencing the fastest rate of growth. That area's population increased an average of 3.8% annually during the past nine years; nearly four times faster than the statewide average. Above average population growth also occurred in the Southeast Fairbanks Census Area (1.7%), the Fairbanks North Star Borough (1.3%), and the Municipality of Anchorage (1.2%). Small positive annual growth occurred in the Wade Hampton Census Area (1.0%), the Kenai Peninsula Borough (0.8%), Bethel Census Area (0.6%), Nome Census Area (0.4%), the Aleutians East Borough (0.3%) and Northwest Arctic Borough (0.2%).

In contrast, the remaining nineteen of Alaska's county equivalent areas had average annual losses of population between 2000 and 2009. The largest percentage losses were in the Bristol Bay Borough (-2.8%), Yakutat City and Borough (-2.7%), Hoonah-Angoon Census Area (-2.5%) and Aleutians West Census Area (-2.0%). In addition, Wrangell City and Borough (-1.9%), Lake and Peninsula Borough (-1.8%), Yukon-Koyukuk Census Area (-1.6%), Prince of Wales-Outer Ketchikan Census Area (-1.4%), Petersburg Census Area (-1.3%), Valdez-Cordova Census Area

(-1.1%), North Slope Borough (-0.9%), Ketchikan Gateway Borough (-0.9%), Haines Borough (-0.5%), Dillingham Census Area (-0.4%), Denali Borough (-0.3%), Sitka City and Borough (-0.3%) all had annual average population loss. Skagway Municipality, Juneau City and Borough and Kodiak Island Borough all essentially had no growth since 2000.

Group Quarters

As indicated in Chapter 1, two general categories of persons in group quarters are recognized: institutionalized persons (such as those in prisons, nursing homes or military barracks) and other persons in group quarters (such as those in rooming houses, group homes, college dorms, emergency shelters, or logging and fish processing bunk houses). In 2009, an estimated 21,498 persons or 3.1% of Alaska's population lived in group quarters housing in Alaska, from 19,349 persons or 3.1% in 2000. Table 2.2 provides household and group quarters information for all boroughs and census areas by labor market regions for 2000 and 2009.

According to the 1990 census, the proportion of persons in group quarters housing in Alaska by type was as follows: military (42.5%); fish processing, logging and miscellaneous group quarters (26.5%); correctional institutions (12.7%); college dorms and religious group quarters (6.3%); nursing homes (5.8%); homeless and abused shelters (2.2%); juvenile institutions (1.9%); rooming houses, group homes, halfway houses, etc. (1.6%); visible street locations (0.4%); and hospitals (0.4%).

The 2000 census shows the following proportions in group quarters: military (20.5%); fish processing, logging and miscellaneous group quarters (20.9%); correctional institutions (17.2%); college dorms and religious group quarters (9.5%); nursing homes (4.2%); homeless and abused shelters (not reported); juvenile institutions (2.2%); rooming houses, group homes, halfway houses, etc. (9.2%); visible street locations (not reported); and hospitals (1.4%).

In 2009, approximately 58% of Alaska's group quarters population lived in the Municipality of Anchorage and Fairbanks North Star Borough. Military barracks, University of Alaska dormitories, State of Alaska correctional facilities, and a combination of profit and non-profit group homes and nursing homes, and homeless shelters made up the volume of group quarters locations in these more populated areas.

People living in group quarters housing dropped 48% in the Aleutians West Census Area between 1990-2000 due mainly to the closing of the Adak

Naval Air Station. However, the Aleutian Chain continues to be dominated by group quarters living connected with fishing and the seafood processing industry, with 45% of its total population in group quarters in 2009. In 2009, the Aleutians East Borough still had the greatest proportion of their population living in group quarters housing (54.5%) followed by the Aleutians West Census Area (39.9%). The overall statewide average was 5.1% in 2009.

Other areas in the state with relatively high proportions of group quarters housing were Fairbanks North Star Borough (5.9%), Northwest Arctic Borough (4.2%), Southeast Fairbanks Census Area (3.4%), Yakutat Borough (3.2%), Nome Census Area (2.9%) and Kenai Peninsula Borough (2.8%). Group quarters in Southeast Fairbanks Census Area and Fairbanks North Star Borough are largely military in character. Fairbanks North Star Borough is also home to a large number of college students living in dormitories. A state-run Pioneer's Home and the Coast Guard contribute to the Group Quarter population in Sitka and mining accounts for the group quarters population in Northwest Arctic Borough.

Census Area Housing Units and Households

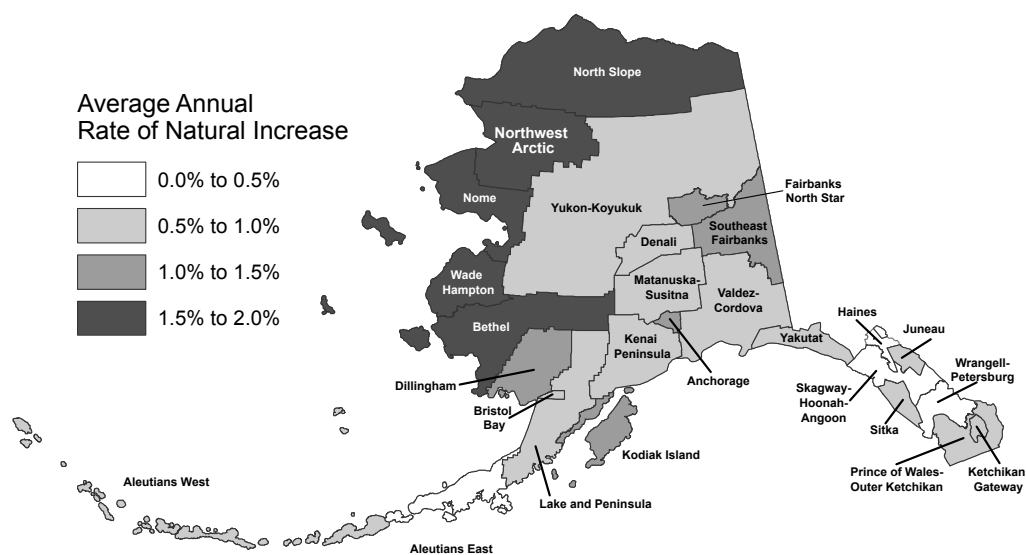

Comparative information on housing units and households for Alaska by borough and census area are shown in Table 2.2. The number of occupied households in Alaska in 2009 was estimated at 252,526, an increase of 30,926 or

14.0% since 2000. The number of persons per household on a statewide basis declined slightly from 2.74 in 2000 to 2.66 in 2009.

In 1990, Alaska's homeowner vacancy rate was 4.5% and the rental vacancy rate was 8.5%. At the time of the 1990 census, 16,991 or 7.3% of housing units classified as seasonal, recreational or occasional use were vacant. Boroughs or census areas that had the highest proportion of such housing were: Lake and Peninsula Borough (34.9%), Yukon-Koyukuk Census Area (27.5%), Nome Census Area (26.7%), Bristol Bay Borough (23.8%), Skagway-Yakutat-Angoon Census Area (23.4%), Matanuska-Susitna Borough (21.4%), Southeast Fairbanks Census Area (19.3%), Valdez-Cordova Census Area (18.6%), Haines Borough (18.5%), Kenai Peninsula Borough (14.6%), and Dillingham Census Area (13.0%). In some rural areas, such housing may be associated with fish camps or fish processing. In other areas, particularly on the road system, such housing tends to be primarily for seasonal recreational purposes.

In 2000, Alaska's homeowner vacancy rate was 1.9% and the rental vacancy rate was 8.5%. At the time of the 2000 census, 21,474 or 8.2% of housing units classified as seasonal, recreational or occasional use were vacant. Boroughs or census areas that had the highest proportion of such housing were: Lake and Peninsula Borough (58.3%), Bristol Bay Borough (38.9%), Yakutat Borough (35.7%), Denali Borough (30.5%), Yukon-Koyukuk Census Area (28.9%),

Figure 2.3
Average Annual Rate of Natural Increase by Borough/Census Area, 2000-2009

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit

Dillingham Census Area (27.1%), Skagway-Yakutat-Angoon Census Area (22.3%), Northwest Arctic Borough (22.2%), Haines Borough (21.2%), Nome Census Area (19.2%), Matanuska-Susitna Borough (19.2%), Southeast Fairbanks Census Area (16.4%), Kenai Peninsula Borough (18.3%), Valdez-Cordova Census Area (13.9%), Wade Hampton Census Area (13.4%), Aleutians East Borough (11.0%), Prince of Wales-Outer Ketchikan Census Area (10.5%), Wrangell-Petersburg Census Area (9.9%) and Bethel Census Area (9.8%). While hard numbers on construction throughout the state do not exist, the number of new seasonal recreational homes appears to have increased substantially during the 1990s in some areas of the state.

A household includes all persons who occupy a housing unit, which can be a house, an apartment, a mobile home, a group of rooms, or a single room that is occupied as separate living quarters. Areas associated with larger households are predominately Native Alaskan areas in northern and western Alaska. In 2009, these areas included Wade Hampton Census Area with an average of 4.68 persons per household, followed by Northwest Arctic Borough (3.93), Bethel Census Area (3.86), North Slope Borough (3.58), Nome Census Area (3.49), Dillingham Census Area (3.11), Kodiak Island Borough (3.03), and Lake and Peninsula Borough (3.02).

The smallest households were found in Denali Borough (1.91), followed by Aleutians West Census Area (2.03), Skagway-Hoonah-Angoon Cen-

sus Area (2.07), Haines Borough (2.12), Bristol Bay Borough (2.16), Yakutat Borough (2.24), Valdez-Cordova Census Area (2.32) and Wrangell-Petersburg Census Area (2.35). In every case, however, the household size has fallen slightly since 2000 as the result of an aging population. Southeast Alaska is well-represented on the list of small household sizes, as the median age there tends to be older and there is a higher incidence of households that no longer contain children.

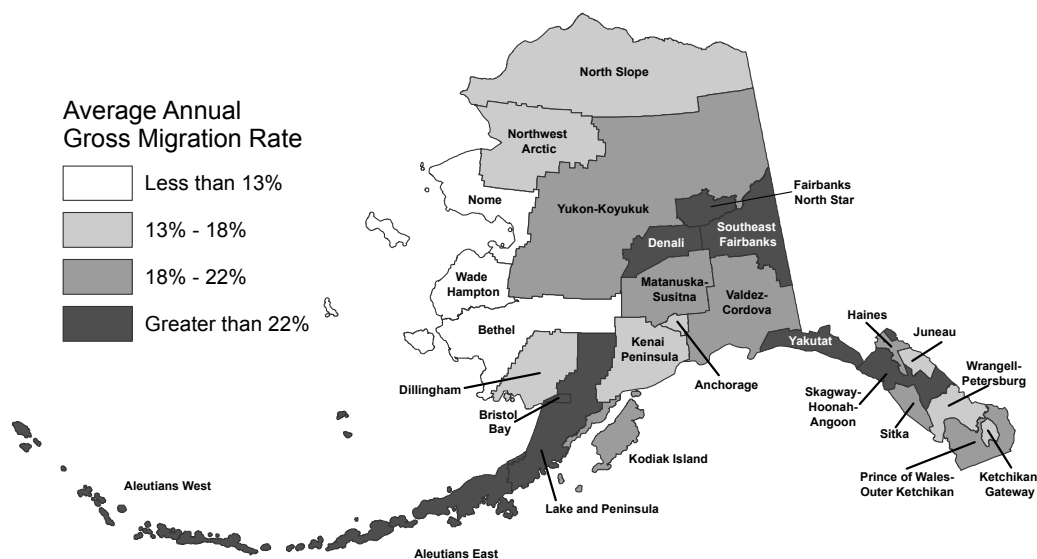

Population Density

The density of Alaska's population is shown in Table 2.3. Overall, Alaska's land area is equal to 16.1% of the entire United States. In 2009, Alaska averaged 1.21 persons per square mile compared to 86.79 persons per square mile nationally. As discussed elsewhere, because of federal, state and Native ownership and land use and accessibility, these numbers can be somewhat misleading.

The highest population density in Alaska in 2009 were found in the Municipality of Anchorage with 171.24 persons per square mile, followed by Fairbanks North Star Borough 12.73 persons per square mile and Juneau City and Borough with 11.28. The lowest density of people was found in Alaska's interior with the Yukon-Koyukuk Census Area averaging less than 0.04 person per square mile.

Fifteen boroughs and census areas had population densities that averaged less than 1.0 person

Figure 2.4
Average Annual Gross Migration Rate by Borough/Census Area, 2000-2008

Sources: IRS County to County Migration Flows and Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit

per square mile. Some borough and census area populations are limited to small parts of their total area, so population density of settled areas may be considerably higher than what is officially given. For example, most of the population of the Matanuska-Susitna Borough is concentrated in the Susitna River Valley adjacent to Anchorage. In this case, population density in this area would be much greater than the 3.42 persons per square mile average that was given for the borough average.

Census Area Components of Change

Population change consists of two components: natural increase, which is births minus deaths, and net migration, which is in-migration minus out-migration. These statistics are presented in Table 2.3. In addition, birth and death rates and proportion of Alaska's population are included for each of the areas covered. In terms of net population change, the major population centers garnered the largest increases, with the Municipality of Anchorage showing the largest increase between 1990 and 2000, adding 33,945 persons. Anchorage was followed by the Matanuska-Susitna Borough (19,639), Kenai Peninsula Borough (8,889), Fairbanks North Star Borough (5,120), Juneau City and Borough (3,960) and Bethel Census Area (2,390). The areas which had a net loss of population between 1990 and 2000 included Aleutians West Census Area (-4,013), Yukon-Koyukuk Census Area (-1,968), Wrangell-Petersburg Census Area (-358), Skag-

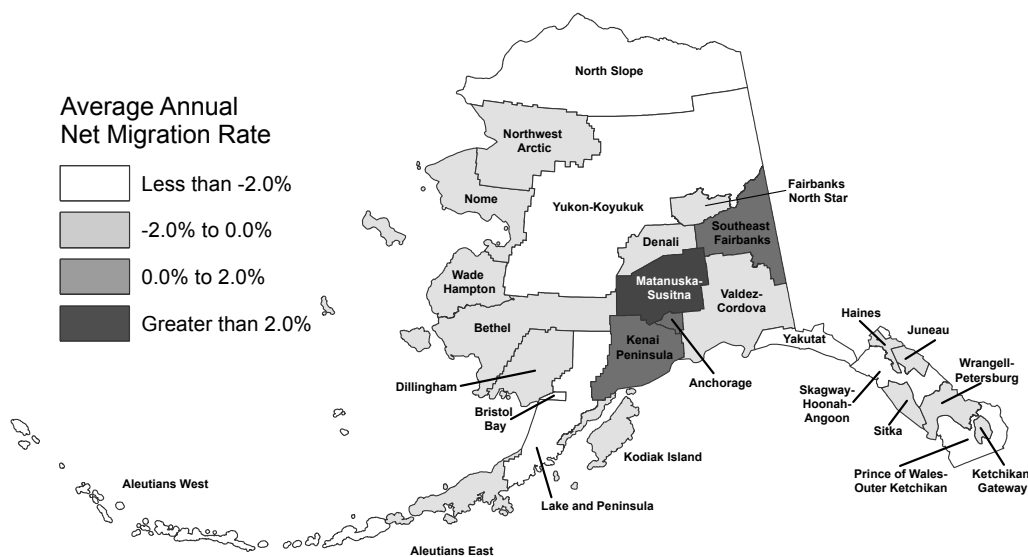

way-Hoonah-Angoon Census Area (-244), Bristol Bay Borough (-152), and Prince of Wales-Outer Ketchikan Census Area (-121).

Between April of 2000 and July of 2009, 11 boroughs and census areas gained population, while 18 had net losses. The largest growth from 2000 to 2009 occurred in the Municipality of Anchorage (30,305), Matanuska-Susitna Borough (24,992) and Fairbanks North Star Borough (10,939). The Municipality of Anchorage grew primarily through natural increase (29,102), which outstripped net migration (1,203). The Matanuska-Susitna Borough grew primarily through net migration (18,571), which exceeded natural increase (6,421). Except for the Matanuska-Susitna Borough, every area with a positive population change saw their natural increase (positive) exceed their net migration (generally negative).

Births and Deaths

In 2008-2009, the birth rate for Alaska was 16.8 births per 1,000 people. This was somewhat below the 1990-2000 decade average of 18.6 births per 1,000, and a slight increase from the previous two years' rates of close to 16.5 per 1000; however, the state was still above the national average of 13.9 births per 1,000. The highest birth rates were found in areas of the state with greater than average Native American populations. The Wade Hampton Census Area produced the highest birth rate with 32.7 births per 1,000 population. Other areas with high fertility

Figure 2.5
Average Annual Net Migration Rate by Borough/Census Area, 2000-2009

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit

in 2008-2009 included the Northwest Arctic Borough with 27.6 births per 1,000, the Nome Census Area (27.5), the North Slope Borough (27.4) and the Bethel Census Area (25.4). The birth rate in all these areas but the Wade Hampton Census Area and Bethel Census Area has increased since the 1990s.

Birth rates in the state were lowest along the Aleutian Chain and in Southeast Alaska. The Aleutians East Borough and the Aleutians West Census Area, where 65-67% of the population is male, many of whom work in fishing or fish processing, had relatively low birth rates of 5.1 and 8.0 respectively per 1,000 population in 2008-2009. In Southeast, where the median age of the population is the oldest in the state, lower than average birth rates were found in Haines Borough (7.4), Skagway Municipality (8.2), Petersburg Census Area (9.4), Wrangell Borough (9.6), Sitka City and Borough (11.8), Hoonah-Angoon Census Area (12.7), Juneau City and Borough (13.6), Ketchikan Gateway Borough (13.9) and Yakutat Borough (16.4).

Alaska's death rate was 4.9 per 1,000 population in 2008-2009. This was slightly higher than the rate in 1990 and 2000. The state's lowest mortality rate was 1.1 per 1,000 people in the Denali Borough. Other low mortality areas included the Aleutians East Borough (1.5 deaths per 1,000), Aleutians West Census Area (2.2), Yakutat Borough (3.3) and Wrangell City and Borough (3.8). The state's highest mortality rates were in Hoonah-Angoon (10.7), Petersburg Census Area (10.5), Bristol Bay Borough (9.0), Yukon-Koyukuk (8.0), and Nome Census Area (7.9). Below-average mortality rates for 2008-2009 were reported for four of Alaska's five largest urban areas: Fairbanks North Star Borough (3.9), Juneau City and Borough (4.4), Municipality of Anchorage (4.5) and Matanuska-Susitna Borough (4.6). The Kenai Peninsula Borough (7.1) was slightly above the statewide average. In the 2008-2009 period, 2,564, or 76%, of all deaths in the state were reported in these five boroughs.

Migration

Migration refers to the movement of people across a boundary such as a national, state or county border for the purpose of establishing a new permanent residence. Movement across international boundaries is referred to as immigration or emigration. Movement into or out of a state or county is referred to as in-migration or out-migration. The difference between in- and out-migration is net migration. The total volume of migration (in-migration plus out-migration) is known as gross migration. Movement from one location to another within a county is referred to as local movement. Tracking and explaining migration

may be extremely complex and reflects many life cycle, work and personal events.

Reasons for Migration

There are many reasons why people migrate. First, young adults are the most likely to move. Persons between 18 and 30 along with any young children belonging to young families are universally the most mobile. The movement of persons in their late teens and early 20's is most frequently to seek post secondary education, enter military service, seek a first job or accompany family members. Counties containing colleges and military facilities are focal points of this movement nationwide.

Similarly, certain types of employment have distinctive patterns of migration. Persons working in resource industries and fishing flow to and from the resource. Seasonal industries such as fishing attract a highly transient workforce. Fish processing attracts the most non-resident workers and this group of migrants has high gross migration to and from out of state locations. "Military rotation" is a relatively constant migration flow that only changes as the Armed Forces are expanded or reduced in the state. Military migration tends to be limited to ages of 18 to about 40 years of age. Military and dependent rotations may make up as much as 29% of all of the interstate migration flows to and from Alaska and these are concentrated in Fairbanks North Star Borough, the Municipality of Anchorage, Denali Borough and Kodiak Island Borough. A different pattern of migration is found in retirement, with flows going to states and counties popular as retirement locations. This migration has not been large historically because of the smaller numbers of older Alaskans. Retirement migration tends to begin after age 50. Figure 2.4 shows the percentage of gross migration for 2000-2006 by Alaska borough and census area, as measured by IRS statistics.

Lastly, flows come and go as employment expands or contracts in communities relative to other communities. Depending on opportunities elsewhere, the local availability of employment and local environments may or may not compete with employment and communities elsewhere to attract migrants. Similarly, people may remain in a location even when employment opportunities may not exist. These are some of the reasons why population growth or decline may not necessarily match employment growth. Economically driven migration (such as a plant closing) tends to be of relatively short duration and generally disappears as those who have been laid off leave to find other employment. Rarely, the decline of an industry can lead to the death of a community. Alaska has many "ghost towns," abandoned when the work ran out.

Migration Trends Since 1980

In 1980, 72.4% of Alaska's population lived in the Municipality of Anchorage, Fairbanks North Star Borough, Matanuska-Susitna Borough, Kenai Peninsula Borough, and Juneau City and Borough. By the 1990s, 74.8% of the population lived in these boroughs and by 2000, they contained 77.0% of the state's population. Most of this change in population distribution is due to migration. Figure 2.5 shows the patterns of average annual net migration rates from 2000 to 2009.

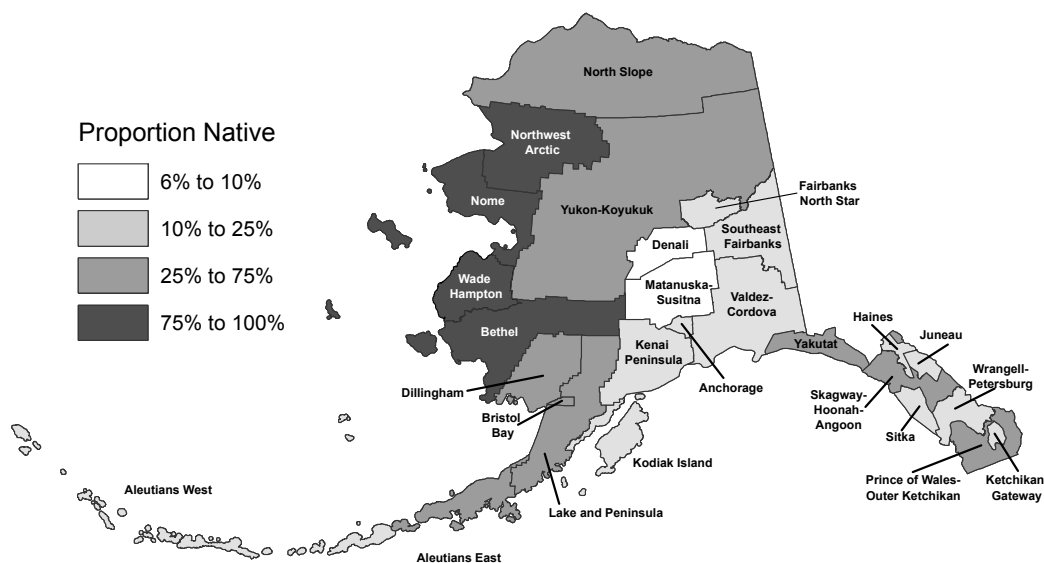

The period from 1980-1985 was unique as a period of substantial spending of oil revenue on State programs and infrastructure. It reflects the largest period of migration to Alaska after the building of the pipeline. Almost every area of the state showed average annual gains through migration and the few who had losses did not have large losses. Matanuska-Susitna Borough, Kenai Peninsula Borough, Kodiak Island Borough, Juneau City and Borough and Prince of Wales-Outer Ketchikan Census Area had the greatest rates of increase. Sitka, Wrangell-Petersburg, Wade Hampton, the Aleutians and Valdez-Cordova had small losses.

The period from 1985-1990 represents the "bust" which followed the "boom" of the early eighties. The price of oil plummeted and almost all of

Alaska had net migration losses. It is the only time since 1980 that Matanuska-Susitna Borough has had net out-migration. Yukon-Koyukuk, Southeast Fairbanks and Dillingham all had losses of over 2% a year during this period. While Anchorage had a loss of less than 2% per year during this period, its numerical loss was almost 4,000 migrants a year. Of the urban areas, only Fairbanks North Star Borough grew through migration and this was primarily because of military expansion. All remaining gains were in rural Southeast, the Gulf Coast and the Aleutians. The late 1980's were good years for logging. The Pollock fishery in Alaska in Aleutians West was expanding and fish prices were at an all time high which contributed to the migration in Southeast and Valdez-Cordova.

The early 1990s saw a slight recovery. The Matanuska-Susitna Borough was the only borough with annual in-migration of over 2% per year. In addition, Anchorage, Kenai, Kodiak, Juneau, Haines, Ketchikan, Prince of Wales, Denali, Yakutat and the North Slope all had small net gains through migration. However, losses began to appear in Sitka, Wrangell-Petersburg and Skagway-Hoonah-Angoon as timber started to decline. In addition, the beginnings of base closures helped lead to migration losses in Fairbanks North Star, Yukon-Koyukuk, Bristol Bay and Aleutians West. The losses continued in the remainder of rural Alaska and in Valdez-Cordova as a result of the Exxon Valdez oil spill.

Figure 2.6
Proportion Native American (Alone) by Borough/Census Area, 2009

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit

The late 1990s showed a further reduction in the areas of growth through migration. The military cutbacks seen in the late 1990-1995 period continued into 1995-2000. There was a strong national economy combined with slow growth in Alaska. Only Matanuska-Susitna Borough and Aleutians East Borough had an annual net gain through migration of more than 2%. Juneau, Haines and Kenai Peninsula Boroughs and Dillingham Census Area also had slight migration gains. Most of Juneau's and Haines' gains were from declines in other areas of Southeast. The greatest losses were in Wrangell-Petersburg and Prince of Wales-Outer Ketchikan census areas as a result of the further decline in logging. Kodiak had cut-backs in the Coast Guard and declines in fishing. Aleutians East gained because of the movement of a substantial amount of fish processing on shore. While outflows were not large, all of rural Alaska continued to have migration losses during this period.

In the 2000-2009 period, Matanuska-Susitna Borough (18,571), Municipality of Anchorage (1,203), Kenai Peninsula Borough (831) and Southeast Fairbanks Census Area (471) had net growth through migration. The decline in suitable land for development in Anchorage continues to fuel the growth of the Mat-Su Valley. Every other borough and census area lost population to migration on average during 2000-2009. The greatest losses due to migration occurred in the Juneau City and Borough (-2,399), Bethel Census Area (-2,159), Ketchikan Gateway Borough (-1,936) and North Slope Borough (-1,824). Fairbanks North Star Borough had substantial losses in 2002-2003 due to military movement. Some of this was recovered in the 2003-2005 period with losses again in 2005-2006, gains in 2006-2007 and losses again in 2007-2008 with the loss of a fighter wing from Eielson AFB. In 2008-2009, Fairbanks North Star Borough experienced a loss of 652 people. The expansion of missile defense between 2004-2007 at Fort Greely in the Southeast Fairbanks Census Area has been responsible for the positive in-migration around the Delta Junction area.

Population Composition

As with the total population, borough and census area population estimates of age, race and sex for the 1990s will be consistent with the MARS (Modified Age, Race) estimates for 2000. MARS estimates eliminate the Other Races category and adjust for errors in age reporting from the census.

Race Composition

Racial composition of the state's boroughs and census areas (Tables 2.4 to 2.6) tends to be divid-

ed into Native versus non-Native areas. The outer coastal area extending from the northwest to the southwest part of the state remains predominately Native American. Three boroughs (Lake and Peninsula, North Slope and Northwest Arctic) and five census areas (Bethel, Dillingham, Nome, Wade Hampton and Yukon-Koyukuk) were at least 65% Native American in 2009.

On the other hand, the coastal and "railbelt" areas of the state are largely non-native. Ten boroughs (Denali, Fairbanks North Star, Haines, Juneau, Sitka, Kodiak Island, Kenai Peninsula, Ketchikan Gateway, Matanuska-Susitna and the Municipality of Anchorage) and five census areas (Southeast Fairbanks, Skagway-Hoonah-Angoon, Aleutians West, Wrangell-Petersburg and Valdez-Cordova) were more than 65% non-Native in 2009.

The Municipality of Anchorage had the largest number of Native Americans Alone and Alone or in Combination (between 27,487-38,258 respectively) of any borough or census area in 2009, but the proportion was just 9.5-12.2% of the borough's total population, up slightly from 2000 (7.4-9.9%). Anchorage has the largest number of Native Americans of any city in Alaska and ranks 18th for county Native population in the U.S. in 2008. The second largest number of Native Americans was in the Bethel Census Area (13,832-14,562). Other significant Native populations were found along the western coast and northern part of the state. The six largest numerical increases between 2000 and 2009 in the number of Natives occurred in the Municipality of Anchorage (8,220-11,144), Matanuska-Susitna Borough (3,061-4,499), Fairbanks North Star Borough (2,623-3,594), Kenai Peninsula Borough (891-1,149), Bethel Census Area (691-877) and Juneau City and Borough (484-659).

In 2009, 46,134-48,650 (41.2-35.1%) Native Americans lived in areas of the state where Natives made up more than half of the population. The rate in 2000 was slightly higher at 47.6%, but significantly lower than the 54.5% rate in 1990. Because of out-migration from rural areas and a faster than average rate of natural increase, the proportion of Native Americans living in boroughs with less than ten percent Native American population grew to about 42% in 2009 up from 30.1% in 1990 and 22.4% in 1980. Boroughs with less than ten percent Native population Alone in 2009 included the Municipality of Anchorage (9.5-12.2%), Fairbanks North Star (9.0-11.7%), Kenai Peninsula (8.6-10.9%), Matanuska-Susitna (7.5-10.7%) and Denali (6.6-11.0%).

Native American population has shown some geographic redistribution between 1990 and 2009. Over the last 18 years, the largest increase in the share of the total Native popula-

tion has been in four boroughs or census areas. The largest shift in the distribution of the Native American population has occurred in the Municipality of Anchorage. In 1990, 17.1% of the Native population lived in Anchorage. By 2009, that proportion had increased to 24.6%-27.6%. Similarly the Native proportion of the Matanuska-Susitna Borough increased from 1.5% in 1990 to 5.7%-6.9% of the state's native population in 2009. Kenai Peninsula Borough's share increased from 3.4% to 4.1%-4.5%. Fairbanks North Star Borough increased slightly from 6.2% in 1990 to 7.5%-8.5% in 2009. Denali Borough and Juneau City and Borough remained almost constant. Proportionally, every other area of the state had decreases in their share of Natives in spite of higher fertility.

The share of Native American population remained constant or decreased in the remaining boroughs and census areas. The areas which showed the greatest percentage point loss in share between 1990 and 2009 were: Yukon-Koyukuk Census Area (-1.3 to -1.5), North Slope Borough (-1.0), Bethel Census Area (-0.9), Northwest Arctic Borough (-0.8), Nome Census Area (-0.7), Dillingham Census Area (-0.6), and Prince of Wales-Outer Ketchikan Census Area (-0.5). Internal distribution may not account for all of the changing geographic share of Native American's in Alaska. While evidence is indirect, the migration of Natives out of Alaska (particularly from Southeast) may also have helped contribute to the redistribution.

Age and Male/Female

Table 2.7 shows 2009 estimates by male/female and five-year age groups for the state, labor market regions, and census areas. Included are median age, senior citizens (65+), working (16+) and voting (18+) age populations. Comparisons are made in all tables between 2009 estimates and 2000 census data.

The male/female ratio relates to the number of males per 100 females. In 2009, statewide there were 104.2 males for every 100 females. The boroughs and census areas with the highest male/female ratios and the chief economic cause for each ratio are as follows: Aleutians East Borough (202.6—fishing), Aleutians West Census Area (185.4—fishing and seafood processing), Denali Borough (131.2—military and mining), Bristol Bay Borough (120.8— fishing and seafood processing), Prince of Wales-Outer Ketchikan Census Area (120.1—fishing and logging), Hoonah-Angoon Census Area (116.9- fishing), Yukon-Koyukuk Census Area (114.8—rural interior), Valdez Cordova Census Area (112.2), Wrangell Borough (111.5 - fishing) and Southeast Fair-

banks (111.4—military). Military populations and resource-driven industries generally have created the highest male/female ratios.

The boroughs and census areas with the lowest average male/female ratios are as follows: Municipality of Anchorage (100.3), Sitka City and Borough (100.7), Juneau City and Borough (101.2), Ketchikan- Gateway Borough (101.4), Lake and Peninsula Borough (104.4), Kenai Peninsula Borough (104.8) and Matanuska-Susitna Borough (104.9). In general, urban areas of the state and areas with older populations tend to have lower male/female ratios than rural areas.

Median Age

The median age in Alaska was estimated at 33.5 years as of July 1, 2009, an increase from the 2000 median age of 32.5. Alaska's population is aging, reflective of the trend throughout the United States. The U.S. median age was 36.8 in 2009, up from 35.3 in 2000. The U.S. and state median age increased 1.5 and 1.0 years respectively from the 2000 census.

The areas of Alaska with the oldest population in 2009 were found in Haines Borough (46.4 years of age), Wrangell Borough (45.2), Hoonah-Angoon Census Area (44.7), Bristol Bay Borough (42.0), Skagway Municipality (41.8), Petersburg Census Area (40.8), Valdez-Cordova Census Area (40.2), Denali Borough (39.6), Kenai Peninsula Borough (39.4), Sitka City and Borough (39.3), Prince of Wales-Outer Ketchikan Census Area (39.3), Ketchikan Gateway Borough (39.0), Aleutians West Census Area (38.6), Yakutat Census Area (38.4), Juneau City and Borough (38.0), Aleutians East Borough (36.8) and Yukon Koyukuk Census Area (35.0).

The youngest median ages in 2009 were found in the Northern and Southwest regions of the state. These areas included Wade Hampton Census Area (19.4 years of age), Northwest Arctic Borough (23.0), Bethel Census Area (23.7), Nome Census Area (25.3) and North Slope Borough (25.4). A young median age generally indicates a higher than average fertility rate. This is supported by the proportion of population zero to four years of age in these areas being significantly above the statewide average.

Overall, the state's median age increased 3.1 years between 1990 and 2000, indicating Alaska's population is indeed aging. The heavy out-migration of young adults associated with military realignments and the closing of logging camps and the slowdown in commercial fishing are a few examples of economic conditions that speed up the aging of the population apart from the demographic components of births and

deaths.

The largest increases in median age between 2000 and 2009 occurred in Hoonah-Angoon Census Area (7.6 years), Bristol Bay Borough (6.0), Haines Borough (5.7), Wrangell Borough (5.6), Petersburg Census Area (5.2), Prince of Wales-Outer Ketchikan Census Area (4.6), Sitka City and Borough (4.1 years), Valdez-Cordova Census Area (4.1), Yukon-Koyukuk Census Area (3.9) and Kenai Peninsula Borough (3.1). Rapid increases in median age occur when there is an out migration of younger adults, declining fertility, or both. However, not all areas aged during this time. High fertility rates and overall net out-migration of older adult or in-migration of younger adult age groups can work to lower the average age of population. These conditions existed in the Nome Census Area (-2.4), Bethel Census Area (-1.7), Dillingham Census Area (-1.7), North Slope Borough (-1.5), Northwest Arctic Borough (-1.0), Wade Hampton Census Area (-0.6), Lake and Peninsula Borough (-0.3), Aleutians East Borough (-0.2) and Southeast Fairbanks Census Area (-0.1) where the median age declined between 2000 and 2009.

Elders

The percentage of persons 65 years and older was 7.5% in 2009. There has been a steady increase in the older population from 2.9% in 1980, 4.0% in 1990, and 5.7% in 2000. Although Alaska still has the smallest percentage of persons over 65, it is following the nationwide trend toward an increasing share of older persons.

Some boroughs and census areas within the state had a larger concentration of older Alaskans than others. The Southeast region of the state had the greatest proportion of elders. Wrangell Borough led with 16.6%, followed by Haines Borough with 14.2%, Hoonah-Angoon Census Area with 13.0%, Petersburg Census Area with 11.7% and Sitka City and Borough with 11.2% of their population estimated at 65 years and older. Other Southeast areas with a higher than average percentage of older residents were Ketchikan Gateway Borough (10.5%), Prince of Wales-Outer Ketchikan Census Area (10.2%), Skagway Municipality (9.9%), Yakutat Borough (9.2%) and Juneau City and Borough (8.4%). Some areas outside of Southeast with increasingly large shares of seniors are Kenai Peninsula Borough (10.9%), Yukon-Koyukuk Census Area (9.9%), Southeast Fairbanks Census Area (9.3%), Valdez-Cordova Census Area (8.8%) and Bristol Bay Borough (8.8%).

The Aleutians West Census Area, with its transient population, had the lowest proportion of persons 65 years and older, 2.8% of the total population. Other areas with relatively few older

Alaskans include the Aleutians East Borough at 3.1%, North Slope Borough at 5.2% and Wade Hampton Census Area at 5.2%.

In 2009, eighty-five percent of elder Alaskans 65 years of age or older lived within the following areas: Municipality of Anchorage (20,625 elder Alaskans), Matanuska-Susitna Borough (6,424), Fairbanks North Star Borough (5,778), Kenai Peninsula Borough (5,823), Juneau City and Borough (2,579), Ketchikan Gateway Borough (1,366), Bethel Census Area (1,014) and Sitka City and Borough (965). Most seniors either choose or need to live in the more urban areas of the state where medical care and other necessities are more accessible.

Income in Alaska

The most recent statistics on income for Alaska are shown in Tables 2.8 and 2.9. The Department of Commerce, Bureau of Economic Analysis (BEA) provides personal income information both at the statewide level and by borough and census area. The most recent year for which statewide earnings are available for sub-state areas is 2008. Per capita income is derived using the BEA's earnings information provided and the 1990-2008 population series in this publication.

Total state personal income is estimated quarterly and county personal income is estimated annually by the BEA. Table 2.8 shows the change in annual state and county personal income in five year increments since 1990, not adjusted for inflation. Total personal income for Alaska in 2008 was estimated at \$30.2 billion, an increase of \$17.7 billion since 1990. Personal income has increased statewide at an average annual rate of 7.5% since 1990, compared to 8.0% for the United States. The highest average annual rate of change in total personal income since the 1980s was from 2007 to 2008 (7.8%).

The bulk of total personal income in Alaska comes from net earnings (67.8%), most of which are wage and salary disbursements, as well as wage and salary supplements and proprietors' incomes, less contributions for government social insurance. Wage and salary disbursements exceeded \$16.5 billion in 2008, which was about 55% of total personal income. It is important to note that the net earnings figures are adjusted totals of wage and salary disbursements, since wage data is reported by place of employment and personal income data is reported by place of residency. Other components of personal income in Alaska are transfer payments (17.6%) and earnings from dividends, interest and rent (14.6%).

Personal income is heavily distributed to four of the “railbelt” boroughs, Kenai Peninsula, Anchorage, Matanuska-Susitna and Fairbanks North Star. Personal income from these four boroughs makes up 76.9% of the state total. This large share is driven mostly by the Municipality of Anchorage, with total personal income of \$14.0 billion, or 46.2% of the state total. Growth in personal income is also dominated by railbelt boroughs. Since 1990, the Matanuska-Susitna

Borough has seen its share of statewide personal income increase 3.7%. This reflects a standout average annual growth rate of 17.3%, compared to 7.5% for the state since 1990. Average annual growth in total personal income has also increased in the North Slope Borough, Southeast Fairbanks Census Area, Bethel Census Area and Wade Hampton Census Area (all above 8.0%).

The Southeast region had the largest decline in

its share of state total personal income, which fell 2.6%. Despite its shrinking share of state income, Southeast continued to have average annual growth of 5.2% from 1990. The Southwest region has also exhibited slow growth in personal income (4.5%), but this is mostly due to the lagging Aleutians West Borough, which has seen -0.9% average annual growth in total personal income since 1990. This loss is almost entirely attributable to the closure of the Adak naval air

station in 1997, and the area has actually seen an increase in personal income since 2000.

Per capita income, which is total personal income adjusted for population, is shown in Table 2.9 in five year increments from 1990. Per capita income in Alaska in 2008 was \$44,318, an increase of \$21,590 since 1990. However, if per capita income is considered in real (adjusted for inflation) instead of nominal (no adjustment) terms,

Source: Alaska Department of Labor and Workforce Development, Research and Analysis, Demographics Unit.

Alaskan per capita income increased \$4,176 in the 18 years up to 2008. The highest average annual rate of change in nominal per capita personal income since the 1980s was from 2007 to 2008 (6.9%). Although this publication will continue to use nominal dollar values for income, inflation and its effect on personal income must be taken into consideration by the reader.

Per capita GDP in Alaska ranked first nationally in 1980, but fell to seventh place by 1990 and 15th by 2000. Due to Alaska's faster than average growth from 2000 to 2008 in per capita income—5.0% average annual growth in Alaska compared to 3.6% for the U.S.—Alaska rose to 9th place nationally.

Per capita income can fluctuate either because of change in income, population, or both. The highest average annual growth was in the Northern Region (6.9%), Interior (6.1%), Southeast (5.1%), and Anchorage/Matanuska-Susitna (4.7%). Growth was the lowest in the Gulf Coast (4.5%) and the Southwest (4.3%).

Statistics on money income are also collected by the Census Bureau at the time of the decennial census and are used in many Census Bureau surveys to tabulate the distribution of income and compute median household and family income statistics. They also allow computation of the number of persons in poverty. Census money income, unlike total personal income, does not include estimates of imputed income, lump sum payments, Medicaid, Medicare and food stamps, and employer contributions to private welfare and pension plans.

Total personal income excludes, and money income includes, personal contributions for social insurance, income from private pensions and annuities and child support.

Notes:

(N) indicates that income figures were not available for these places in this year.

Percentages will generally not add to 100, since some areas are included twice.

Income data source: U.S. Department of Commerce, Bureau of Economic Analysis.

The income data in this table do not match data in Table 2.7 in the 1998 and earlier Population Overviews because the BEA has changed its income definitions. One example of this is that government pensions have been included in personal income to match.

All income data are in current dollars; that is, the amounts have not been adjusted for inflation.

/1 Denali Borough was included in the Yukon-Koyukuk Census Area until 1991. For continuity, this line shows the old definition, including Denali Borough.

/2 Denali Borough was incorporated December 7, 1990.

/3 This line shows the new definition of the Yukon-Koyukuk Census Area, excluding the Denali Borough.

/4 Yakutat was included in this Census Area until 1992. For continuity, this line shows the old definition, including Yakutat.

/5 This line shows the new definition of the Skagway-Hoonah-Angoon Census Area, excluding Yakutat.

/6 Yakutat Borough was incorporated September 22, 1992.

/7 Lake and Peninsula Borough was incorporated April 24, 1989. Income data are not available for 1990 for this area.

Notes:

Per capita estimates are produced by dividing BEA Total Personal Income data by the Alaska Department of Labor estimated population for the year. These estimates may differ slightly from the BEA estimates, which rely on the Census Bureau population estimates.

(N) indicates that income figures were not available for these places in this year.

Percentages will generally not add to 100, since some areas are included twice.

Income data source: U.S. Department of Commerce, Bureau of Economic Analysis.

The income data in this table do not match data in Table 2.7 in the 1998 and earlier Population Overviews because the BEA has changed its income definitions.

One example of this is that government pensions have been included in personal income to match the handling of private pensions.

These revisions have increased personal income in Alaska by 5% to 7%.

All income data are in current dollars; the amounts have not been adjusted for inflation.

/1 Denali Borough was included in the Yukon-Koyukuk Census Area until 1991. For continuity, this line shows the old definition, including Denali Borough.

/2 Denali Borough was incorporated December 7, 1990.

/3 This line shows the new definition of the Yukon-Koyukuk Census Area, excluding the Denali Borough.

/4 Yakutat was included in this Census Area until 1992. For continuity, this line shows the old definition, including Yakutat.

Chapter 3

Special Populations and Areas

Introduction

As with past editions of Alaska Population Overview, estimates are presented here for different special populations or special geographic areas. These include the armed forces population, the population of legislative districts, school districts, Alaska Native Regional Corporations and areas of Canada that are adjacent to Alaska. Persons interested in special populations or geographic areas other than those presented here should contact the State Demographer (gregory.williams@alaska.gov).

Armed Forces

Historically, the armed forces have been an important part of Alaska's population. The military buildup in Alaska during World War II and the Korean War was largely responsible for opening Alaska and paving the way for much of its growth since statehood. In 1960, some 32,680 persons 16 years old and over worked in the military and were stationed in the state. Fully 33% of the total labor force at that time was military. As Alaska's economy matured and diversified, the proportion of military has fallen. By 1990, active duty military assigned to the state numbered 23,132 and represented about 5.9% of the state's total labor force. In 2009, the number of active duty military personnel was 24,449, representing 4.7% of the labor force. Despite the decrease in military presence, the armed forces remain one of the largest employers, providing nearly as many jobs in Alaska as the top ten private sector employers in 2009, the most recent year of data, combined (24,625). The number of military stationed in the state exceeds the number employed by other large public sector employers in 2009, including the State of Alaska (18,139), federal government (17,065) and the University of Alaska (7,218).

The number of full time military plus their dependents stationed in Alaska in 2009 totaled 58,346. (Military and dependent populations for the state are shown by borough and census area in Tables 3.1 and 3.2.) Overall, the number of active duty military and dependents increased 5.5 percentage points between 1990 and 2009. The closure of Adak Naval Air Station (NAS), King Salmon Air Force Station (AFS), Galena AFS, and Eareckson AFS contributed to fluctuations in military and their dependents since 1990. Addi-

tionally, personnel restructuring, some of which involved cuts, occurred at Air Force and Army bases in Anchorage and Fairbanks and at Fort Greely, near Delta Junction. Between 2000 and 2009, renewed military presence at Fort Greely and a gradual buildup of forces elsewhere have reversed the downward trend, at least temporarily. In 2009, the military and dependent population had increased 37% since 2000; more closely reflecting the military populations of the early 1990's.

In 2009, the Army represented the largest military presence in the state, with 54% of the active duty members and dependents. This represents a sizeable increase from the 40% in 1990. The Army bases are Fort Richardson in Anchorage, Fort Wainwright in Fairbanks and Fort Greely in Delta Junction.

The second largest military contingent was the Air Force and their dependents, with approxi-

mately 36% of the active duty military and dependents. This represents a decline of 12% since 2000. Nearly all Air Force personnel and their families were assigned to either Elmendorf AFB in Anchorage and Eielson AFB in Fairbanks.

Another branch of the armed services with a substantial presence in the state is the Coast Guard, with approximately 9% of the active duty members and dependents.

The Navy no longer maintains a significant presence here. Naval assignments all but disappeared in Alaska with the closure of Adak naval air station in 1997. At its peak in 1989, active duty personnel and dependents stationed at this remote base in the Aleutians West Census Area numbered 4,688. Today, the Navy has less than a score of active duty personnel in Alaska, primarily assigned to Alaska Command.

As remote military installations have closed, military bases closer to urban areas in the state have increased as a share of the total military. In 2009, for example, the Municipality of Anchorage and the Fairbanks North Star Borough were home to 90% of all military and dependents assigned in Alaska, up from 84% in 1990.

When the size of military and dependent populations is considered relative to local, non-military populations, some bases play a more significant role in local areas than others. The influence of Eielson AFB and Fort Wainwright in Fairbanks North Star Borough is significant. Military and their families accounted for almost 23% of the residents in the borough in 2009. Fort Greely's military population accounted for 20% of the population of Southeast Fairbanks Census Area in 1990, but had a much greater impact in the Delta Junction area where it was located. After closing and reopening as part of missile defense, Fort Greely has made a small

Table 3.2

Military and Dependent Population in Alaska, 2000, 2009

comeback, and the base population is 7% of the population of the Southeast Fairbanks Census Area. Figure 3.1 illustrates military and civilian population composition by age and sex.

Alaska Native Regional Corporation Estimates

The Alaska Native Claims Settlement Act of 1971 created 12 in-state Alaska Native Regional Corporations (ANRCs) which cover the entire state except for the Annette Island Reserve, which is Alaska’s only American Indian reservation. These regional corporations were established to facilitate Alaska Native business and nonprofit endeavors. Corporation boundaries were created to include, as far as practicable, Alaska Natives who share a common heritage and common interests. Population estimates for each regional corporation by race are shown in Table 3.3. The estimates of Native population living within these regions do not necessarily represent shareholders, since shareholders can live outside their corporation area.

The Alaska Native Regional Corporations with the largest Native populations in 2009 were: Cook Inlet (37,357), Calista (20,723), Doyon (12,999) and Sealaska (11,102). Two of the 12 ANRC’s had Native American populations comprising at least three quarters of their total population, Calista (84%) and NANA (79%). From 2000 to 2009, the population of Native Americans increased the most in the following ANRC’s: Cook Inlet (12,062), Doyon (1,766), Calista (1,033), and Bering Straits (113). The largest decreases in Native American populations were in Bristol Bay (-650), Arctic Slope (-487), Aleut (-386), and Sealaska (-290). These numbers do not include persons of more than one race.

Legislative Districts

There are 40 House districts and 20 Senate districts in the state. The current House and Senate areas of the Alaska State Legislature were established by the redistricting plan of 2002. The 2000 census counts are shown in Table 3.4 for each district as well as the 2008 estimates of total population, number of children, voting age population and older population. Voter registration information for 2008, which is the latest election year, and the results of the 2008 statewide general election are included in the table as provided by the Alaska Division of Elections. The number of registered voters may be higher than the voting age population in areas with high population turnover, due to the length of time it takes to clear voter registration rolls.

We estimate that the average house district is currently 16,993 persons and the average Senate District is 33,986. The fastest growing election

districts are senate districts H and G, which are equivalent to house districts 13, 14, 15 and 16. These districts include parts of the Matanuska-Susitna Borough and the Anchorage Municipality, especially the fast growing areas surrounding Palmer and Wasilla. House districts 13, 14 and 15 have all grown around 42% since 2000, and HD 16 has grown over 26% in the past 9 years.

The election districts that have seen the largest population losses can be found across the state, but most losses have been in Southeast Alaska. House district 5 largely covers parts of Southeast, from Valdez to Metlakatla, and has lost over 11% of its population since 2000. Population decline has also been experienced in HD 37, an amalgam of the Aleutian Islands, the Bristol Bay Borough and parts of the Lake and Peninsula Borough and Dillingham Census Area, which has lost about 10% of its population in the past 9 years. House district 1, which includes Ketchikan Borough and a smattering of surrounding areas, has lost almost 8%, and HD 2, which encompasses the Wrangell area, has lost over 8%.

School Districts

Population estimates for Alaska school districts are generally used for planning purposes. Effective allocation of resources is possible only when

the magnitude of population is known. Table 3.5 shows the population for Alaska urban and rural school districts for 1990 and 2000 through 2009. Change in each district's population for the periods 1990-2000 and 2000-2009 are shown, along with annual changes for those periods. Each district's share of the state's population in 2009 is also shown.

Table 3.5 provides information on the percent of high school and college graduates over 25 years of age in 2000. In 2000, 88.3% of Alaska's population 25 years old and over had completed high school, or its equivalent. The American Community Survey shows that by 2008 that percentage rose to 91.6%, placing Alaska second in the ranking of states for high school graduates. The only state with a greater proportion of high school graduates among the 25 and over population is Minnesota, at 91.7%. The national average is 85.0%.

In 2000, 24.7% of all Alaskans 25 years and over were college graduates. The American Community Survey for 2008 indicates that the proportion who completed a bachelor's degree was 27.3%, up slightly. In 2008, Alaska ranked 23rd in the proportion of its population that had completed college, slightly below the national average of 27.7%.

A change in the educational level for districts over a period of time may reflect the educational level of the migrating population or aging of the population. In recent history, younger generations have generally had a higher level of education than older generations.

Of the 53 Alaska School Districts in 2009, the Anchorage School District had the largest population, with 290,588 people. The district was home to 42% of the state's total population. Conversely, the Pelican School District had the fewest people. Only 122 people, or 0.02% of the state's total population, lived there.

Between 1990 and 2000, only five school districts grew faster than the state average. These were Matanuska-Susitna Borough (4.1%), Delta/Greely (2.4%), Kashunamiut (2.3%), Yupiit (1.6%), Anchorage (1.1%) and Fairbanks North Star Borough (1.0%) School Districts. Overall, the state's population has grown annually at 1.0% since 1990.

Sixteen school districts lost population between 1990 and 2000. Much of the population loss occurred within school districts of Southeast Alaska. The average annual rates of decline during this nine-year period were: Pelican (-3.1%), Southeast Island (-2.3%), Chatham (-1.2%) and Hydaburg (-0.1%). A loss of timber harvesting and wood processing jobs within these areas prompted people to move from those mostly rural locations. The military base closures within the Galena School District (-4.2%) and Bristol Bay School District (-1.2%) led to population declines in those areas. The Chugach School District (-4.4%) lost population through annexation. Outlying areas in the vicinity of Cordova had previously been included as a part of the Chugach school district, although children attended Cordova schools. In 1993, Cordova legally extended its city boundary to include this area. Students in Hyder, a small community located 75 air miles northeast of Ketchikan on the Canadian border, are no longer being bussed to Stewart, British Columbia. The Hyder School was opened in August 2000.

For the most recent one-year period, 2008-2009, 26 of Alaska's 53 school districts (49%) were estimated to have lost population while the total state population increased by 1.5%. The largest decreases in population were in the following districts: Chugach (-7.8%), Hoonah City (-6.2%), Bristol Bay Borough (-5.8%), Kake City (-4.2%),

Valdez City (-4.2%), Yukon/Koyukuk (-3.3%), Dillingham City (-3.0%), Galena City (-2.9%), Aleutians Region (-2.8%), and Nome City (-2.7%). Some of declining districts are in Southeast Alaska and showed the continuing impact of cuts in logging and timber production. Other districts listed have been affected by declining economies of fishing and fish processing. Interior or rural communities are experiencing out-migration to more urban areas.

School districts showing the largest percentage population growth during 2008-2009 were: Pelican City (8.9%), Yakutat (6.1%), Alaska Gateway (3.9%), Saint Mary's (3.4%), Unalaska City (3.2%), Aleutians East (3.0%), Kashunamiut (2.7%), Chatham (2.6%), Anchorage (2.4%), and Southeast Island (2.3%). Districts with growing populations tended to be areas with higher than average birth rates or higher than average rates of in-migration or immigration. The above average growth in most of the districts is an indicator of the dangers of using percent growth for comparison. Seven of the ten fastest growing districts populations have been trending downward, and the 2009 estimate does not necessarily indicate a reversal of that trend.

Population of Areas Neighboring Alaska

Alaskans visiting or conducting business with the government of Canada or its people frequently use information on areas and communities that are adjacent to Alaska. Table 3.6 includes population figures for selected areas and communities located within the Yukon Territory and along the border of British Columbia, taken from their 2009 estimates. The areas of British Columbia (59,460) and the Yukon (34,175) adjacent to Southeast contain 93,635 persons compared to the 69,338 population of Southeast Alaska.

Population figures for selected locations within the Russian Far East for 1990 were also published in the Alaska Population Overview: 1991 Estimates. The most recent census of the Russian Federation was conducted in 2002. This census showed the Russian Far East as home to some 6.7 million people; nearly 600,000 of whom live in Magadan, Chukotka and Kamchatka, areas nearest Alaska.

Chapter 4

Alaska Places

Introduction

This chapter contains 2000-2009 population estimates and 2000 Census population statistics for places. Places include incorporated cities or areas that are legally formed under the laws of the state, Census Designated Places (CDPs) and Alaska Native Village Statistical Areas (ANVSA).

Table 4.1 and Figure 4.1 show Alaska's population by size of place, with separate listings for places with population greater than and less than 2,500 (formerly urban and rural). The largest incorporated cities are listed in Table 4.2. Provisional population estimates by borough/census area and by place for the period from 2001-2009 are presented in Table 4.3, along with the 2000 Census. Table 4.4 provides an alphabetical listing of places and their population ranked by size.

Characteristics of Places

Places in Alaska include: incorporated cities or city/boroughs; Census Designated Places (CDP); Alaska Native Village Statistical Areas (ANVSA) and Tribal Designated Statistical Areas (TDSA). As noted earlier, changes in the population for places between 1990 and 2000 may have resulted from changes in geography as well as in population. If you wish to compare the population data given in this edition to years before 2000, you must consult the previous edition of this work, entitled *Population Overview 2001-2002* and *Census 2000*, for year 1990 population estimates using year 2000 geography. For 1990 population in 1990 boundaries, the reader should refer to the 1999 Alaska Population Overview. In the case of cities, change over time can result from annexation as well as from changes in the normal population components such as births, deaths and migration. In the case of CDPs and ANVSAs, all boundaries were as defined by the 2000 Census.

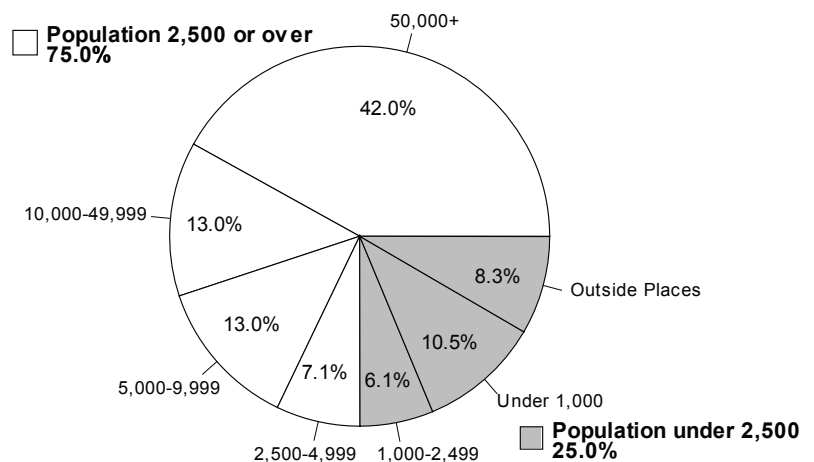

Urban is Redefined

The U.S. Bureau of the Census formerly defined places with populations of 2,500 or more as urban. In 1999, Alaska had

20 cities large enough to be considered urban. With the 2000 Census, the Census Bureau changed its definition of urban to meet more complicated criteria, based on Urban Areas or Urban Clusters, as defined by block population density and other factors. This new definition cannot be replicated in annual estimates, nor can it change until the next census. The Census Bureau has warned that it is to be used for statistical purposes only and not programmatic purposes. We will continue to report the number of cities and places with population greater than or equal to 2,500, in order to provide continuity with the older definition.

Alaska is the largest of the United States in area, and has the lowest population density. It is larger than the states of Texas, California and Montana combined, and its overall population density averages only 1.2 persons per square mile. The average U.S. population density was 79.6 persons per square mile in 2000. This, however, paints a somewhat misleading picture of population distribution in the state. According to the Alaska Department of Natural Resources, 60% of the land in Alaska is owned by the federal government, another 28% is owned by the state, and 11% is owned by Native corporations. Only about one percent of the state is in other private ownership. The other private ownership lands

Sources: U.S. Census Bureau and Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit

cover an area about 27% less than the land area of the states of Massachusetts or New Jersey. Most of the federal and state lands are in parks and refuges, or have development prohibitions or restrictions. While potentially open for development, the Native owned lands are generally not for sale. Of the land potentially available for development, a substantial proportion is very rugged, inaccessible or otherwise inhospitable. Thus, a fairer picture of Alaskan settlement, with densities on available and usable land, is likely to be closer to 100 persons per square mile than one person per square mile.

Contrary to widely held perceptions, Alaska's population is predominately found in relatively dense settlements set in or near vast tracts of unsettled land. In 2009, 75% of the population lived in places with populations of at least 2,500, only slightly below the national average. Under the Census Bureau's new definition of urban, 62.7% of Alaskans were living in urban areas in 2000. As a comparison, 69.6% of Alaska's population lived in places of 2,500 or more in 1990 and 64.3% in 1980.

There were 32 places in Alaska with populations above 2,500 in 2009. The Municipality of Anchorage—the state's largest city—was home to 42% of the overall population. Anchorage has 56% of the population in places of 2,500 or more. The remaining 44% of the population living in places of 2,500 or more lived in places ranging

in size from 2,609 to 32,506 people. Alaska's population living in places of less than 2,500 people made up 25% of the total population, with 16.8% of the total population in some 330 small places, and 8.2% living outside any CDP. Most people living outside of a place were concentrated around cities and CDPs, or along road systems in the Fairbanks North Star Borough, Matanuska-Susitna Borough, Kenai Peninsula Borough, Yukon-Koyukuk Census Area, Kodiak Island Borough or Southeast Fairbanks Census Areas.

Although it is not a census concept, Alaskans sometimes refer to the "Railbelt," the populated area served by the Alaska Railroad. The Railbelt includes Kenai Peninsula Borough, the Municipality of Anchorage, Matanuska-Susitna Borough, Denali Borough, the area around Nenana on the Parks Highway, and Fairbanks North Star Borough. The total population of the Railbelt in 2009 was approximately 524,897, or 75.8% of the State's population.

In Alaska, race and ethnic groups tend to be concentrated by place. Overall, 73.9% of Alaska's population lived in places of 2,500 or more in 2000. The proportion of each race and ethnic group who lived in places of 2,500 or more was: White Alone (76.2%), Native Alone (46.2%), Black Alone (94.5%), Asian Alone (91.1%), Hawaiian & Pacific Islander (92.7%), two or more races (79.1%) and Hispanics (87.3%). Alaska Natives still tend to predominately live in small "rural"

communities. On the other hand, the vast majority of Blacks, Asians, Pacific Islanders and Hispanics are found in places of 2,500 or more. More specifically, 86.8% of Alaska’s Black population lived in the Municipality of Anchorage and Fairbanks North Star Borough. Much of this population is associated with the military. Similarly over 83.5% of the Asian population and 78.8% of the Hispanic population of Alaska lived in the Municipality of Anchorage, Juneau City and Borough, Kodiak city, Unalaska city and Fairbanks North Star Borough. 69.3% of the Hawaiian and Pacific Islanders lived in the Municipality of Anchorage.

Incorporated Cities

As of July 1, 2009, there were 149 incorporated cities in Alaska. Of these, 19 have populations 2,500 or more, and would have been considered urban by the old Census Bureau defini-

tion. Table 4.2 lists these cities, ranked by 2009 population. Another eight cities had populations between 1,000 and 2,500. These included Dillingham (2,264), North Pole (2,200), Cordova (2,126), Wrangell (1,892), Houston (1,664), Craig (1,400), Hooper Bay (1,158) and Delta Junction (1,128).

Census Designated Places

Census Designated Places (CDPs) have no incorporated boundaries. The limit of their settled area is defined by geographic features such as streams, roads or ridges that encompass the settled area. To be recognized as a CDP, a place must be a fairly dense settlement with a sense of community. The CDP must also have been recognized as possibly fitting this definition in 1996 when the Census Bureau began planning the 2000 Census. A total of 198 unincorporated communities qualified as CDPs in 2009. Alaska had

several CDPs with populations larger than that of many incorporated cities. Thirteen of these would meet the Census Bureau's former definition of urban places. These were Knik-Fairview (13,824), College (12,552), Lakes (8,388), Kalifornsky (7,495), Tanaina (7,407), Meadow Lakes (7,319), Sterling (5,348), Nikiski (4,465), Gateway (4,068), Fishhook (3,337), Big Lake (3,331), Butte (3,255) and Eielson AFB (2,896). Sixteen other CDPs had populations between 1,000 and 2,500, including Deltana (2,355), Willow (2,218), Ridgeway (2,050), Ester (2,034) and Bear Creek (2,009). Many of these places are ripe for future annexation or incorporation.

Alaska Native Villages

The Alaska Native Claims Settlement Act of 1971 identified 209 Alaska Native Villages (ANVs). Populations for these villages were first reported in the 1980 Census. Native villages may have boundaries that are the same or different from cities or CDPs. Because of confusion over the legal status of ANVs, the Census Bureau changed the name to Alaska Native Village Statistical Area (ANVSA) for the 1990 Census to emphasize that these were places for statistical purposes only. In 1990, there were 217 ANVSAs. Today, there are 210 ANVSAs. Several have lost their status as Native villages and have become CDPs. One example is the former Alexander ANVSA, which became Susitna CDP.

For 1990 and 2000, the Census Bureau asked village councils to define the boundaries of the ANVSAs. In many cases, these continued to correspond to city or CDP boundaries. In other cases, they did not. Thus, the 2000 ANVSAs may differ from other community boundaries, and they may differ from the boundaries as defined in 1990. In the following tables, there are specific indications where 2000 ANVSA boundaries are different from city or CDP boundaries. In some cases, the boundaries of ANVSAs may overlap more than one CDP.

In a few cases, a village council has defined a Tribal Designated Statistical Area (TDSA) to be vastly larger than the local community area. These include Ninilchik TDSA and Kenaitze TDSA in Kenai Peninsula Borough, and Chickaloon TDSA, Knik TDSA and Kanatak TDSA in Matanuska-Susitna Borough. Lastly, Tetlin TDSA has been defined in Southeast Fairbanks Census Area. In the case of Tetlin, the TDSA is only

slightly larger than Tetlin CDP. The resulting data for the larger of the TDSAs are misleading for almost all statistical purposes. A substitution of CDP information is recommended where an accurate portrait of the character of the community is needed.

Unorganized Territory

Slightly under three-fifths of Alaska's land area lies outside of any incorporated city or borough. In this unorganized territory, the state performs all governmental functions. It was estimated that 19,824 people, or 2.9% of the state's population, lived in such "unorganized" territory in 2009. For comparison, the number of people in 1990 who lived in unorganized territory numbered 23,158, or 4.2% of the state's population. A decade earlier in 1980, 20,000 people, or 5.0% of the state's population, lived outside the structure of any sub-state government entity. The majority of people living in unorganized territory reside in a CDP or ANVSA.

The number of people who lived in unorganized territory outside of all CDPs or ANVSAs, and beyond the purview of any government other than the State of Alaska in 2009 totaled 1,673 or 0.24% of the state's overall population. All but a few hundred of these people live outside communities but along a road system which allows them access to a community. Only a very small number of persons live as isolated individuals or individual families on islands or in remote rural Alaska with access to a community only available by bush plane or small boat.

Alphabetical Listing of Alaska Places, 2000, 2006-2009

Area Name	Vintage 2009 Estimates				Census 2000	Place Rank 2009	Place Rank 2000	City Rank 2009	City Rank 2000
	Estimate 2009	Estimate 2008	Estimate 2007	Estimate 2006					
Teller city *	261	259	255	258	268	163	163	92	95
Tenakee Springs city	104	99	102	104	104	236	247	129	132
Tetlin CDP	169	142	159	153	117	200	236		
Thoms Place CDP	6	7	7	7	22	341	331		
Thorne Bay city	424	439	465	481	557	128	99	71	53
Togiak city *	820	801	786	783	809	69	65	33	32
Tok CDP	1,429	1,397	1,423	1,325	1,393	47	49		
Toksook Bay city *	596	603	608	601	532	97	107	50	58
Tolsona CDP	26	27	28	24	27	311	328		
Tonsina CDP	78	75	75	90	92	257	263		
Trapper Creek CDP	444	405	418	415	423	121	124		
Tululsak CDP *	471	499	485	489	428	116	123		
Tuntutuliak CDP *	384	416	420	407	370	135	135		
Tununak CDP *	330	332	340	332	325	148	146		
Twin Hills CDP *	74	75	81	77	69	262	284		
Two Rivers CDP	663	656	624	627	482	88	111		
Tyonek CDP *	166	154	179	199	193	202	193		
Ugashik CDP *	15	15	13	17	11	330	342		
Unalakeet city *	725	722	723	728	747	80	75	39	39
Unalaska city *	3,662	3,549	3,652	4,028	4,283	23	21	14	12
Upper Kalskag city *	223	235	243	270	230	177	171	101	100
Valdez city	3,475	3,628	3,580	3,675	4,036	24	22	15	13
Venetie CDP	185	177	181	187	202	191	189		
Wainwright city *	551	534	538	517	546	104	104	55	57
Wales city *	148	139	135	139	152	214	206	119	119
Wasilla city	7,245	6,932	6,927	6,486	5,469	12	13	6	9
Whale Pass CDP	60	48	57	61	58	280	292		
White Mountain city *	202	191	214	224	203	180	188	102	111
Whitestone Logging Camp CDP	9	11	9	0	116	337	238		
Whittier city	159	159	173	189	182	207	196	114	115
Willow CDP	2,218	2,136	2,046	1,964	1,658	35	43		
Willow Creek CDP	157	152	162	194	201	208	190		
Wiseman CDP	16	16	17	22	21	324	335		
Womens Bay CDP	740	792	747	759	690	77	80		
Wrangell (city)	1,892	1,939	1,940	1,909	2,448	41	34	23	22
Y CDP	1,057	1,088	1,082	1,102	956	56	57		
Yakutat CDP *	608	590	618	634	680	93	81		

Note: Census corrections to date have been included in all estimates.

CDP-Census Designated Place *Alaska Native Village Statistical Area **Tribal Designated Statistical Area

Glossary

Alaska Native Village Statistical Area (ANV-SA): Designated boundaries that encompass the settled area associated with each Alaska Native Village (ANV). Officials of Alaska Native Regional and Village Corporations, along with U.S. Census Bureau officials, delineated ANVSAs for the sole purpose of presenting Census data. ANVSAs replace the ANVs that the Census Bureau recognized for the 1980 Census, and in some instances the boundaries were changed.

Alaska Native Regional Corporation: Twelve corporate entities in Alaska established under the Alaska Native Claims Settlement Act of 1972 to conduct both business and non-profit affairs of Alaska Natives. The Alaska Native Regional Corporations (ANRCs) cover the entire state of Alaska, except for the Annette Island Reserve. Boundaries were established by the U.S. Department of the Interior, in cooperation with Alaska Natives, and were first identified in the 1980 Census.

Alaska Permanent Fund: A state savings account of oil revenues that was created in 1976 by a voter-approved amendment to the state constitution. A portion of the fund's income is distributed annually to eligible Alaska residents.

Average Annual Rate of Change: A standardized statistical measure of the rate of change, which can be compared for any number of years because it converts the change for any period to a yearly measure.

Census Designated Place (CDP): A closely settled unincorporated population center of at least 25 persons.

Cohort: A group of persons who experience the same event or series of events in a particular period. For example, all persons born in a particular year or all couples married in a particular year are considered a cohort for that year.

Crude Birth and Death Rates: The number of births or deaths during a time period, divided by the total population at the middle of that time period.

De Facto and De Jure Counts: In a census, the enumeration is affected by the type of

population count to be obtained. The census may be designed to count persons where they are found on census day (a de facto count) or according to their usual place of residence (a de jure count). The U.S. Census is a de jure count. Only transients who have no usual place of residence are counted on a de facto basis.

Dependency Ratio: The proportion of the population dependent on the adult population. For youth dependent, the under 18 population is divided by the population ages 18 through 64. For elderly dependent, the population aged 65 or more is divided by the population ages 18 through 64.

Error of Closure: The difference between an estimates series and a decennial census. Error of closure can be the product of small cumulative error in an estimates series over a decade, or it may result from differential accuracy of two decennial censuses.

Fertility: The childbearing performance of individuals, couples, groups or populations. Sometimes measured as the the number of children born to women of a particular childbearing age.

Gross Migration: The sum of the in-migration and out-migration for a geographic area over time. Gross migration is a measure of the total movement or turnover of population.

Group Quarters: All people not living in households are classified as living in group quarters. Two general categories of people in group quarters are recognized: (1) Institutionalized people (such as those in prisons, nursing homes, psychiatric hospitals and residential treatment facilities) and (2) other people in group quarters (such as those in group homes, college dorms, military barracks, fish processing and logging camp bunkhouses and emergency shelters).

Household: All the people who occupy a housing unit. A housing unit is a house, an apartment, a mobile home, a group of rooms or a single room that are occupied as separate living quarters. Separate living quarters are those in which occupants live and eat separately from any other people in a building and which have direct access from the

outside of the building through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living arrangements.

In-migrant: A person who moves into a region or community for the purpose of establishing a permanent residence. Movement from another area within the same nation is called in-migration. Movement from another nation is referred to as immigration.

Median Age: The age that divides a population into two numerically equal groups; that is, the mid-point, where half the people are younger than this age and half are older .

Migration: The movement of people across a specified boundary to establish a new permanent residence. Movement between countries, states or counties is considered migration. Movement within a county is considered "local movement."

Mortality: Death as a component of population change. Usually measured as the number of deaths per 1,000 people in a given year.

Natural Increase: The difference between the number of births and the number of deaths in a given period.

Net-migration: The difference between the number of in-migrants and the number of out-migrants. Net in-migration describes the situation when more people move into the area than out. Net out-migration describes the situation where more people leave the area than come in.

Out-migrant: A person who leaves a region or community for the purpose of establishing a new permanent residence. Movement to another area within the same nation is called out-migration. Movement to another nation is referred to emigration.

Place: A Census Designated Place (CDP), incorporated city or Alaska Native Village Statistical Area (ANVSA).

Population Estimate: A computation of the population of a geographic area on a past or present date. Estimates are often based on some form of administrative records.

Population Projection: A computed estimate of future population, often based on trends in births, deaths and migration.

Resident: A person who lives in Alaska at least six months of the year and/or has no other usual place of residence. Census residency is different from Alaska Permanent Fund eligibility, which requires living in Alaska for at least one calendar year beginning January 1.

Sex Ratio: The number of males per 100 females.

Tribal Designated Statistical Area (TDSA): A statistical entity delineated for the Census Bureau by a federally recognized American Indian tribe that does not have a land base (a federally recognized reservation or off-reservation trust land). A TDSA generally encompasses a compact and contiguous area that contains a concentration of people who identify with a federally recognized American Indian tribe and in which there is structured or organized tribal activity.

Urban Place: An urban place was formerly a place with population of 2,500 or more. Places with less than 2,500 people were formerly considered rural. Details for the new urban/rural definition may be found online at the following address:
census.gov/geo/www/ua/ua_2k.html.
